Preface

The China Health and Retirement Longitudinal Study (CHARLS) is a longitudinal study of individuals over age 45 in China. It was designed to better understand the socioeconomic determinants and consequences of aging. The survey includes a rich set of questions regarding economic standing, physical and psychological health, demographics and social networks of aged persons. The survey is designed to ensure comparability with the Health and Retirement Survey (HRS) in the United States, Indonesia Family Life Panel (IFLS) in Indonesia, and the Korean Longitudinal Study of Aging (KLoSA) in the Republic of Korea. Part of the reason for the close connection is to allow cross-country comparisons using these data.

To facilitate such comparisons, we, with funding and support from National Institute on Aging (NIA), have created the Harmonized CHARLS data which is created to harmonize the CHARLS with the RAND HRS data. To make the data more accessible to researchers, we create a user-friendly version of dataset, similar to the RAND HRS. The RAND HRS contains cleaned and processed variables with consistent and intuitive naming conventions, model-based imputations and imputation flags, and spousal counterparts of most individual-level variables. Harmonized CHARLS includes variables defined as closely as possible to the RAND HRS. This document describes these data.

The Harmonized CHARLS initiative is part of a larger set of projects carried out by the USC Program on Global Aging, Health, and Policy to increase the availability and ease of use for data sets on aging around the world. In addition to the RAND HRS and Harmonized CHARLS, this includes Harmonized SHARE (Europe and Israel), Harmonized ELSA (England), Harmonized JSTAR (Japan), Harmonized KLoSA (South Korea), Harmonized LASI (India), Harmonized TILDA (Ireland) and Harmonized MHAS (Mexico). This also includes a searchable website, www.g2aging.org, with questionnaires, and other metadata on a larger number of related data sets to facilitate the creation of customized data sets using variables from the original data sets and the harmonized ones.

We are grateful for the continuing support of and funding from NIA. In working with the CHARLS data, we greatly benefited from the help from Dr. Yaohui Zhao, Dr. John Strauss, Dr. Albert Park, Yaoyao Zhu, Yafeng Wang, and other CHARLS team members. We have greatly benefited from discussions with and the suggestions from our colleagues Arie Kapteyn, Marco Angrisani, Erik Meijer, Bas Weerman, and the RAND HRS team.

Requested Acknowledgment

We ask all users of the Harmonized CHARLS to please inform our team of any written analysis using data from the Harmonized CHARLS or information from the Harmonized CHARLS Codebook by sending an email to papers@g2aging.org. We also ask users to include the following acknowledgement in their written work: "This analysis uses data or information from the Harmonized CHARLS dataset and Codebook, Version B.2 as of June 2016 developed by the Gateway to Global Aging Data. The development of the Harmonized CHARLS was funded by the National Institute on Ageing (R01 AG030153, RC2 AG036619, R03 AG043052). For more information, please refer to www.g2aging.org."

CHARLS Version and Acknowledgment

This document uses data from CHARLS Wave 1, as of March, 2013, and CHARLS Wave 2, as of November, 2015. CHARLS is supported by Peking University, the National natural Science Foundation of China, the National Institute on Aging and the World Bank.

1. Introduction and Overview

This report documents the Harmonized CHARLS data files, a streamlined collection of variables derived from the China Health and Retirement Longitudinal Study (CHARLS). CHARLS is a panel survey of people aged 45 and over and their partners regardless of age in China. The main goal is to provide a high quality nationally representative sample of Chinese residents' data to serve the need of scientific research on health, economic position and quality of life as people aged. The survey elicits information about demographics, income, assets, health, cognition, family structure and connections, health care use and costs, housing, job status and history, expectations, biomarkers and insurance.

CHARLS is supported by Peking University, the National Natural Science Foundation of China, the Behavioral and Social Research Division of the National Institute on Aging, and the World Bank. CHARLS shares the same basic guideline as Health and Retirement Study (HRS) and related aging surveys such as Indonesia Family Life Panel (IFLS) in Indonesia, and the Korean Longitudinal Study of Aging (KLoSA) in the Republic of Korea.

The baseline wave of CHARLS was conducted from 2011 to 2012; the individuals will be followed up every two years and all data will be released to public after one year after the end of data collection. This initial sample includes 10,257 households and 17,500 individuals in 150 counties/districts and 450 villages or urban communities among 28 provinces. Currently, Wave 1 and 2 data which we describe in this document, are available for study. The Harmonized CHARLS data file incorporates the demographic background data, family information data, family transfer data, health status and function data, household income data, household roster data, housing characteristics data, individual income data, weight data and work, retirement and pension data. It does not include any data which is not for public release.

1.1. Gateway to Global Aging Data

The Health and Retirement Study (HRS) has achieved remarkable scientific success, as demonstrated by an impressive number of users, research studies, and publications using it. Its success has generated substantial interest in collecting similar data as population aging has progressed in every region of the world.

The result has been a number of surveys designed to be comparable with the HRS: the English Longitudinal Study of Ageing (ELSA), the Survey of Health, Ageing and Retirement in Europe (SHARE), the Korean Longitudinal Study of Aging (KLoSA), the Japanese Study on Aging and Retirement (JSTAR), the China Health and Retirement Longitudinal Study (CHARLS), and the Longitudinal Aging Study in India (LASI). The overview of this family of surveys, including their research designs, samples, and key domains can be found in Lee (2010).

As these surveys were designed with harmonization as a goal, they provide remarkable opportunities for cross-country studies. The value of comparative analyses, especially the opportunities they offer for learning lessons resulting from policies adopted elsewhere, is widely recognized. Yet there are only a limited number of empirical studies exploiting such opportunities. This is partly due to the difficulty associated with learning multiple surveys and the policies and institutions of each country.

Identifying comparable questions across surveys is the first step toward cross-country analyses. The Gateway to Global Aging Data (G2G) helps users understand and use these large-scale population surveys on health and retirement. The G2G includes several tools to facilitate cross-national health and retirement research. It includes a digital library of survey questions for all participating surveys. Its search engine enables users to find relevant survey questions. The G2G also includes a concordance with information comparing measures within and across surveys over time. Using these tools, researchers can identify all questions related to particular key words or within a domain. The G2G also includes population and sub-population estimates for key harmonized variables.

The G2G can be accessed at www.g2aging.org. For more information about using the G2G visit the Help page. For more information about obtaining the Harmonized CHARLS from downloading the Stata file used to create the Harmonized CHARLS using the G2G see “Chapter 4. Distribution and Technical Notes.”

1.2. Unit of Observation

Like in the HRS, an age-eligible individual is sampled and then this individual and his or her spouse or partner regardless of age is interviewed, but no other household members, even if they are age-eligible. We distinguish between three units of observation: individual, couple, and household. A “couple” is a “single individual or individual with his/her spouse. A “household” includes the single individual, spouse, and all other household members.

1.3. Data File Structure

The Harmonized CHARLS data contain the first wave of CHARLS. The data are stored in a “fat format” where each observation represents one respondent. The unit of observation is the individual. Each individual is uniquely identified by the unique identifier “ID”. Households are identified by HHID. Couples are identified by wave-specific HwCOUPID where “w” refers to the specific wave. Households are identified by the unique identifier “HOUSEHOLDID”. It is important to note that unlike the RAND HRS, households in the CHARLS might include multiple couples and other household members.

1.4. Variable Naming Convention

With few exceptions, variable names in the Harmonized CHARLS Data follow a consistent pattern. The first character indicates whether the variable refers to the reference person (“R”), spouse (“S”), a financial unit couple (“H”), and the full household (“HH”).¹² The second character indicates the wave to which the variable pertains: “1”, or “A”. The “A” indicates “all,” i.e., the variable is not specific to any single wave. An example is RABDATE, the birth date of the respondent. The remaining characters describe the concept that the variable captures. For example:

Variable `S1HLTHLM` captures whether the spouse of the reference person experiences an impairment or health problem that limits the kind or amount of paid work he/she can do. The name of the variable does not indicate who provided the information. For example, the spouse’s health problem may have been reported by the spouse himself or herself, or it may have been reported by the reference person as a proxy.

In the text below, we may refer to variables such as `SWHLTHLM` for example, without specifying the wave. This reference points at the group of variables `S1HLTHLM`.

Variable labels also follow a consistent pattern. The first characters denote the name of the variable, followed by a colon. The remainder of the label describes the concept that the variable captures. For example, the variable label of `S1HLTHLM` is:

`S1HLTHLM:W1 Hlth problems limit work`

It may seem duplicative to include the name of the variable and the wave in the variable label. However, statistical packages often suppresses the variable name and instead uses its label in the presentation of results.

Variable names in the Harmonized CHARLS are generally based on the variable name used in the RAND HRS for the same measure. Measures which are exactly or near-exactly comparable between the Harmonized CHARLS and RAND HRS use the exact same name. For instance `RABYEAR` is the variable name for the respondent birth year in both the Harmonized CHARLS as well as the RAND HRS. If the Harmonized CHARLS measure is deemed only somewhat comparable with RAND HRS version of that measure, the variable name in the Harmonized CHARLS will often end in “_C.” This variable name suffix indicates some CHARLS-specific difference with RAND HRS version of this measure. For example, the Harmonized CHARLS

variable for ADL summary name `RwADLA_C` while the RAND HRS variable is named `RwADLA`. The reason for this difference in variable name is that the CHARLS used different components for this summary variable. Other reasons for Harmonized CHARLS-specific variable names include: differences in survey questions, differences in survey routing, and whether both sets of variables use imputed values. Harmonized CHARLS specific variable names are used to notify users that there are substantial differences between the RAND HRS and Harmonized CHARLS measure and comparability between these measure is not straight-forward.

The Harmonized CHARLS includes some variables without Harmonized CHARLS-specific variable names even though the Harmonized CHARLS measure is significantly different from the RAND HRS measure of the same name. In particular wealth and income measures in the Harmonized CHARLS do not use Harmonized CHARLS -specific variable names even though wealth and income measures in the Harmonized CHARLS are expressed in China Yuan while income and wealth measures in the RAND HRS are always expressed in nominal dollars. Users should always check the “Differences with RAND HRS” section of each measure before comparing any Harmonized CHARLS measure to the RAND HRS version of the same measures or any other Harmonized Dataset version of the same measure.

1.5. Missing Values, Nonresponse, and Imputations

Variables may contain missing values for several reasons. Stata offer the capability to distinguish multiple types of missing values, and we have attempted to record as much information as possible. Generally, the codes adhere to the classification in Table 1.

Table 1. Missing Codes

Code	Reason for missing
.	Reference person did not respond to this wave
.a	Age ineligible
.d	Don't know
.r	Refused
.s	Skipped due to routing
.k	No kids
.n	Not applicable
.u	Reference person is not married (for spouse variables)
.v	Spouse did not respond this wave (for spousal variables)
.m	Other missing

The coding scheme varies across variables. Consult the Data Codebook for details on individual variables.

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

1.6. Weighting and Accounting for Survey Design

The Harmonized CHARLS includes variables to allow users to produce weighted estimates with survey design adjusted standard errors where provided by CHARLS.

CHARLS produces seven different weights. There are two different weights at household level: one is adjusted for non-response and the other is not adjusted for non-response. At the individual level, CHARLS produces three different weights: individual weight without non-response adjustment, individual weight with household non-response adjustment, and individual weight with household and individual non-response adjustment. Finally, CHARLS provides two biomarker weights, one with household non-response adjustment and the other with household and individual non-response adjustment.

In addition to weights, CHARLS uses a stratified (by per capita GDP of urban districts and rural counties) multistage (county/district-village/community-household) proportionate to population size (PPS) random sampling method to strictly control the quality of the samples. For more detail information about weight and survey design, please see http://charls.ccer.edu.cn/uploads/document/public_documents/application/Challenges-of-Population-Aging-in-China-final.pdf at China Health and Retirement Longitudinal Study (CHARLS) website.

2. Wealth and Income Variables

2.1 Units of Observation and financial respondent

In CHARLS, financial questions are asked at three different levels:

1. Individual level: all respondents and spouses answer about their own financial status that include the value of cash, saving account, stocks, mutual funds, government bond, debt, all other savings, individual earnings (wage and bonus), pension income, government transfer income, other income and capital income. Please note that CHARLS asks individual wage, bonus and pension in both employment and income modules; in order to prevent double counting the value, we only report the higher value of the two as the corresponding income.
2. Other household members (individual-based) level: the financial respondent answers the questions and reports every household member's financial status which includes the value of financial assets, debt, earning income (wage and bonus), pension income, government transfer and other income.
3. Household level: the financial respondent reports the whole household financial status which include the value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, agricultural asset, monetary asset, agricultural income, self-employed activities income, government and/or public transfer income, and capital income.

In order to distinguish whether a value corresponds to the respondent, the spouse, the respondent and spouse as a financial unit, or to the full household, financial variable names either begin with "R", "S", "H", or "HH". If the value corresponds to individual level, the variable names begin with "R" for respondent or "S" for spouse. If the value corresponds to the couple level then the name of the variable will start with "H". On the other hand, if the value corresponds to the full household or other household members then the name of the variable will start with "HH".

For harmonization purposes, it is preferable to use the same unit of observation in different harmonized data sets. But since the HRS neither has information on wealth and income of household members outside the couple nor does the HRS have individual-level asset information, measures are provided at the individual level such as earning, pension and etc., the couple level, and the household level (e.g. asset income and wealth) where possible. Thus, in constructing our couple-level variables, we ignore income and wealth from household members outside the couple. These couple-level variables can be compared to the RAND HRS income and wealth household measures.

For more information, please visit CHARLS official website <http://charls.ccer.edu.cn/en>

2.2. Currency

All CHARLS financial variables are expressed in current yuan. CHARLS asset questions are asked about current asset values.

For cross-country comparisons of financial variables, these values have to be converted to a single monetary unit. The Harmonized CHARLS dataset includes exchange rates for this purpose. It is the users' responsibility to check what period a variable refers to and accordingly use the appropriate exchange rate.

3. Structure of Codebook

The Data Codebook contains the codebook documenting all variables in the Harmonized CHARLS Data. This section explains how to interpret the codebook entries. The figure below shows a typical codebook page; the numbers in circles correspond to comments below.

Self-Report of Health 1					
Wave	Variable	Label	Type		
2	R1SHLT	R1SHLT:w1 r self-report of health	Categ	4	
3	1 S1SHLT	S1SHLT:w1 s self-report of health	Categ		
5	Descriptive Statistics				
Variable	N	Mean	Std Dev	Minimum	Maximum
R1SHLT	12612	3.864	0.923	1.00	5.00
S1SHLT	9854	3.857	0.921	1.00	5.00
6	Categorical Variable Codes				
Value-----	R1SHLT				
.d:dk	8				
.m:missing	123				
.r:refuse	1				
.s:skip	4964				
1.excellent	1576				
2.very good	3467				
3.good	3709				
4.fair	2264				
5.poor	889				
Value-----	S1SHLT				
.d:dk	4				
.m:missing	40				
.s:skip	3825				
.u:unmar	3538				
.v:sp NR	447				
1.excellent	85				
2.very good	893				
3.good	1796				
4.fair	4650				
5.poor	2430				
7	How Constructed				

CHARLS has two scales for respondents to self-report their current health condition; one is a scale ranging from 1 for Excellent to 5 for Poor, and the other is a scale ranging from 1 for Very Good to 5 for Very Bad. Respondents were asked their health status twice; in the beginning of the health module and again in the end of the health module. In the beginning of the health section, respondents are randomly assigned into two groups, the first group of respondents are asked first scale in the beginning and second scale at the end. The second group of respondents are vice versa.

RwSHLT is the respondent's self-reported general health status using a scale ranging from 1 for Excellent to 5 for Poor. When respondents don't know, are missing, or refuse to answer, RwSHLT is assigned special missing values .d, .m, or .r, respectively. RwSHLT is

set to skip (.s) if the question is not asked due to the random sample selection. RWSHLT is set to missing (.) for respondents who did not respond to the current wave.

8

→ **Cross-Wave Differences in CHARLS**

No differences known.

9

→ **Differences with the RAND HRS**

Unlike the HRS, CHARLS also employs a second scale of self-reported general health status. RWSHLTA is the respondent's self-reported general health status using a scale ranging from Very Good to Very Poor.

10

→ **CHARLS Variables Used**

Wave 1:
DA001 self comment of your health

1

Title: The variables are documented in groups according to the concept that they measure. For example, there are eight variables related to self-reported health, corresponding to four waves and respondent/spouse. The title is often followed by a short description of the concept that is captured.

2

Variable Names: This entry shows the waves of variables in the group.

3

Variable Labels: This entry shows the Stata variable labels. As discussed above, the labels typically include the name of the variable, the file on which it is present, and a description of its contents.

4

Variable Type: This entry indicates the type of variable. It may be continuous (Cont), categorical (Categ), or character (Char).

5

Descriptive Statistics: This entry shows descriptive statistics on each variable. They include the number of nonmissing values, the mean, standard deviation, minimum value, and maximum value.

6

Categorical Value Codes: This entry shows the value label codes. These are only relevant for categorical variables. The first character(s) of the value labels indicate the value to which each label has been assigned. For example, value "1" is mapped into "1. Excellent" (not just "Excellent"). The entry also indicates which labels are assigned to which variables, and shows frequency tabulations for all categorical variables.

7

How Constructed: This entry provides background on the manner in which variables were constructed.

8

Cross-Wave Differences in CHARLS: This entry briefly describes differences in question wording or contents between interview waves.

- 9 *Differences with the RAND HRS:* This entry describes any differences between the RAND HRS version of the variable and the Harmonized CHARLS version of the variable. It is imperative these differences are understood when using harmonized measures.
- 10 *CHARLS Variables Used:* This entry provides the names and labels of raw CHARLS variables that were used to construct the new variables.

4. Distribution and Technical Notes

The Harmonized CHARLS Data file is created using the Gateway to Global Aging Data (www.g2aging.org) and saved in a Stata format. To create and use the file one must have at least Stata/IC, version 12 or higher. To create the Harmonized CHARLS visit the Download tab of the Gateway to Global Aging Data. Under the CHARLS column click the link for the Harmonized CHARLS Stata Code. From this page you can download the Harmonized CHARLS Stata Creation Code and find further instructions on running the Creation Code in Stata. Once created the Harmonized CHARLS data file can be accessed anytime by the user with or without using the G2G website.

This is version **B.2** of the Harmonized CHARLS Data.

A copy of this Harmonized CHARLS Codebook can be obtained on the Gateway to Global Aging Data (www.g2aging.org) under the Download tabs.

5. Data Codebook

Section A: Demographics and Identifiers

Identifiers

Wave	Variable	Label	Type
1	ID	id:person identifier/12-char	Char
1	HOUSEHOLDID	householdid:hhold id /10-char	Char
1	HHID	hhid:hhold id /num	Cont
1	PNC	pnc:person id /2-char	Char
1	PN	pn:person id /num	Cont
1	ID_W1	id_w1:wave 1 person identifier/11-char	Char
1	HHID_W1	hhid_w1:wave 1 hhold identifier/9-char	Char
1	COMMUNITYID	communityid:community id/7-char	Char

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
HHID	21131	423654942.12	701759779.85	10104101.00	3477633140.00
PN	21131	1.45	0.51	1.00	4.00

How Constructed:

ID is the 12-digit character identifier that identifies each respondent uniquely. It consists of two separate parts:

HouseholdID is a 10-digit character household identifier to indicate the household to which a respondent belonged when entering the panel. HHID is the numeric version of household identifier.

PNC is a 2-digit character person identifier used by CHARLS to indicate each participant within the household. PN is the numeric version of person identifier.

The original Wave 1 identifiers are ID_w1 and hhid_w1. ID_w1 is a 11-digit identifier for each respondent and hhid_w1 is a 9-digit character household identifier.

Starting at wave 2, CHARLS revised the ID and HouseholdID formats for splitting household due to divorce. The ID and HouseholdID are based on wave 2 data. User can link CHARLS wave 2 original data using ID and HouseholdID and link CHARLS wave 1 original data using ID_w1 and hhid_w1.

communityID is a 7-digit character community identifier to indicate which community that the household belongs to.

Cross Wave Differences in CHARLS

Starting at wave 2, CHARLS revised the householdID into 10 digit number and the 10th digit is an indicator for splitting household due to divorce. Also starting at wave 2, CHARLS revised the individual identifier ID to a 12 digit number, where the last two digits identify individuals within households which is comparable to those in baseline individual ID.

Differences with the RAND HRS

CHARLS revised the wave 1 ID and householdID so users need to use ID_w1 and hhid_w1 to link wave 1 original data.

CHARLS Variables Used:

Wave 1:

COMMUNITYID	Community ID
HOUSEHOLDID	Household ID
ID	Individual ID

Wave 2:

COMMUNITYID	community id
HOUSEHOLDID	household id
ID	individual id

Spouse Identifier

Wave	Variable	Label	Type
1	S1ID	s1id:w1 spouse id (char)	Char
2	S2ID	s2id:w2 spouse id (char)	Char
1	S1PN	s1pn:w1 spouse person id(num)	Cont
2	S2PN	s2pn:w2 spouse person id(num)	Cont
1	RASPID1	raspid1:id of 1st spouse	Char
1	RASPID2	raspid2:id of 2nd spouse	Char

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
S1PN	17705	1.26	0.71	0.00	2.00
S2PN	18605	1.20	0.75	0.00	4.00

How Constructed:

SwID is derived from the ID of persons with a matching couple id. If the respondent is not married or partnered or if the respondent is married but there is no other respondent in the data then SwID is set to 0. SwPN is derived from the PN of person with a matching couple id. Like SwID, SwPN is set to 0 if the respondent is not married or partnered, or if the respondent is married but there is no other respondent in the data.

The SwID of the respondent's first spouse is given in RASPID1. With subsequent waves of data, the respondent may separate from the current spouse and remarry. The new spouse's ID will be recorded in RASPID2, as the second spouse (which is not the same as the spouse in wave 2 of the data) and so on.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

No differences known.

CHARLS Variables Used:

Wave 1:		
	HOUSEHOLDID	Household ID
	ID	Individual ID
Wave 2:		
	HOUSEHOLDID	household id
	ID	individual id

Couple Identifier

Wave	Variable	Label	Type
1	H1COUPID	h1coupid:w1 couple id/num	Cont
2	H2COUPID	h2coupid:w2 couple id/num	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
H1COUPID	17705	5159.02	2967.95	1.00	10251.00
H2COUPID	18605	5572.73	3202.35	1.00	11187.00

How Constructed:

HwCOUPID is the couple identifier and uniquely identifies a couple in a given wave. HwCOUPID is the same for each person in the couple household, allowing researchers to match spouses who are both in the data.

A respondent whose spouse or partner does not appear in the survey data or does not have a spouse or partner (unmarried, divorced, widowed, separated) are also assigned a value for HwCOUPID, such that HwCOUPID is not missing for any respondent in a given wave. HwCOUPID is set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

No differences known.

CHARLS Variables Used:

Wave 1:		
HOUSEHOLDID	Household ID	
ID	Individual ID	
Wave 2:		
HOUSEHOLDID	household id	
ID	individual id	

Wave Status: Response Indicator

Wave	Variable	Label	Type
1	INW1	inw1:in wave 1	Categ
2	INW2	inw2:in wave 2	Categ

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
INW1	21131	0.84	0.37	0.00	1.00
INW2	21131	0.88	0.32	0.00	1.00

Categorical Variable Codes

Value-----	INW1	INW2
0.no	3426	2526
1.yes	17705	18605

How Constructed:

INWw indicates whether an individual in the CHARLS sample responded to a particular wave. Respondents identified as having either a full or partial interview either in person or through a proxy are considered to have responded and are coded as 1.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

No differences known.

CHARLS Variables Used:

Wave 1:		
HOUSEHOLDID	Household ID	
ID	Individual ID	
Wave 2:		
HOUSEHOLDID	household id	
ID	individual id	

Wave Status: Interview Status

Wave	Variable	Label	Type
1	R1IWSTAT	r1iwstat: w1 r interview status	Categ
2	R2IWSTAT	r2iwstat: w2 r interview status	Categ
1	S1IWSTAT	s1iwstat: w1 s interview status	Categ
2	S2IWSTAT	s2iwstat: w2 s interview status	Categ

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
R1IWSTAT	21131	0.84	0.37	0.00	1.00
R2IWSTAT	21131	1.87	2.43	1.00	9.00
S1IWSTAT	14889	1.00	0.00	1.00	1.00
S2IWSTAT	14819	1.00	0.00	1.00	1.00

Categorical Variable Codes

Value-----	R1IWSTAT	R2IWSTAT
0.inap.	3426	
1.resp, alive	17705	18605
5.nr, died this wv		441
9.nr, dk if alive or died		2085
Value-----	S1IWSTAT	S2IWSTAT
.u:unmar	2278	2426
.v:sp nr	538	1360
1.resp, alive	14889	14819

How Constructed:

RwIWSTAT variable gives the response status of the respondent at each wave. Respondents are identified by code 1, non-respondents are identified by codes 0, 4-6 and 9.

If the Respondent has not entered the sample yet then RwIWSTAT is set to 0. Non-response code 4 means that the respondent is alive so far as we know but did not respond. A code of 5 means that the respondent died between the last interview and the current one. Non-response code 9 means that it is not possible to determine whether the non-responding individual is alive or dead.

SwIWSTAT gives the response and mortality status of the current wave's spouse. It is taken from the spouse's RwIWSTAT. Note that when a spouse dies the spouse interview status for the surviving spouse will have a code of .u respondent unmarried if the widow does not remarry. A .v missing code indicates that there is no information in the Master file on why the spouse did not respond. Note also that SwIWSTAT is set to plain missing (.) if an individual did not respond at a particular interview, including if he/she died.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

No differences known.

CHARLS Variables Used:

Wave 1:

HOUSEHOLDID	Household ID
ID	Individual ID

Wave 2:

HOUSEHOLDID	household id
ID	individual id
INDV_L_DIED	whether respondent died in longitudinal sample

Household Analysis Weight

SLWTRESPBIOB	11873	37699.63	62301.05	10428.39	3378585.75

How Constructed:

The individual level weights are taken directly from the weights file.

RwWTRESP is the individual level analysis weight without the non-response adjustment.

RwWTRESPA is the individual weight with the household non-response adjustment.

RwWTRESPB is the individual weight with the household and individual non-response adjustment.

RwWTRESPL is the individual longitudinal weight.

RwWTRESPBIOA is the biomarker weight with household non-response adjustment.

RwWTRESPBIOB is the biomarker weight with household and individual non-response adjustment.

RwWTRESP, RwWTRESPA, RwWTRESPB, RwWTRESPL, RwWTRESPBIOA, and RwWTRESPBIOB are set to plain missing (.) if the respondent did not respond at a particular interview.

SwWTRESP, SwWTRESPA, SwWTRESPB, SwWTRESPL, SwWTRESPBIOA, and SwWTRESPBIOB indicates the current wave's spouse's weights. They are taken from the spouse's values to RwWTRESP, RwWTRESPA, RwWTRESPB, RwWTRESPL, RwWTRESPBIOA, and RwWTRESPBIOB, respectively. CHARLS also asked spouse's birth month and birth day. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used. They are set to plain missing (.) if the respondent did not respond at a particular interview.

Cross Wave Differences in CHARLS

Biomarker weights are not available in the wave 2.

Differences with the RAND HRS

The RAND HRS does not provide the individual level longitudinal weight, biomarker weights, as well as the weights with household or individual non-response adjustment.

CHARLS Variables Used:

Wave 1:

BIO_WEIGHT1	biomarker weight with household non-response adjustment
BIO_WEIGHT2	biomarker weight with household and individual non-respo
IND_WEIGHT	individual weight without non-response adjustment
IND_WEIGHT_AD1	individual weight with household non-response adjustment
IND_WEIGHT_AD2	individual weight with household and individual non-resp

Wave 2:

INDV_L_WEIGHT	individual longitudinal weight
INDV_WEIGHT	cross-section individual weight without nonresponse adju
INDV_WEIGHT_AD	cross-section individual weight with household nonrespon
INDV_WEIGHT_AD	cross-section individual weight with household and indiv

Number of Household Respondents

Wave	Variable	Label	Type
1	H1HHRESP	h1hhresp:w1 # respondents in household	Cont
2	H2HHRESP	h2hhresp:w2 # respondents in household	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
H1HHRESP	17705	1.84	0.36	1.00	2.00
H2HHRESP	18605	1.80	0.40	1.00	2.00

How Constructed:

HwHHRESP is the number of individuals in the house who responded at each wave. It counts the number of respondents sharing the same household id. HwHHRESP is set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

No differences known.

CHARLS Variables Used:

Categorical Variable Codes

Value-----	H1CPL	H2CPL
0.not coupled	2797	3769
1.coupled	14908	14836

How Constructed:

HwCPL indicates whether this household is treated as a couple household or not. Households in CHARLS can consist of a single respondent or a couple. HwCPL is set to one if there is a couple in the household, i.e., two respondents are married or partnered. Otherwise HwCPL is set to zero if there is a single respondent in the household.

HwCPL is set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

No differences known.

CHARLS Variables Used:

Wave 1:		
	HOUSEHOLDID	Household ID
Wave 2:		
	HOUSEHOLDID	household id

Interview Dates

S2IWM	14819	7.72	0.91	1.00	11.00

How Constructed:

RwIWY and RwIWM indicate the individual's interview year and month. If the respondent is not answer in the specific wave then (.) plain missing is assigned.

SwIWY and SwIWM indicate the current wave's spouse's individual interview year and month. They are taken from RwIWY and RwIWM of the respondent's spouse, respectively. If the respondent is not designated as coupled in the current wave and unmarried, a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is use

.v:sp nr	538	1360
0.no dispute	14077	14049
1.dispute, last report used	812	770

How Constructed:

RABYEAR is the respondent's reported birth year. RABMONTH is the respondent's reported birth month. RABDAY is the respondent's reported birth date. RABYEAR, RABMONTH and RABDAY are respondent's birth year, month and day. If the respondent does not provide birth year CHARLS also ask respondents their age. RABYEAR uses the reported age to fill the missing on birth year. RABYEAR, RABMONTH and RABDAY are set to special missing (.m) when birth information is reported as "missing."

Starting in wave 2 CHARLS asks respondents to confirm their previous report of birth date. If respondent indicates the previous wave information is incorrect, CHARLS asks the respondent for the correct birth year, month and date. RABYEAR, RABMONTH and RABDAY always use the corrected birth date information.

RAFBDATE is a flag variable which indicates whether RABYEAR, RABMONTH and RABDAY were initially reported using birthdate values which were later reported to be incorrect by the respondent. A value of 0 indicates the respondent did not dispute their first report of birth date. A value of 1 indicates that the respondent reported their initial report of birthdate was incorrect.

SwBYEAR, SwBMONTH, SwBDAY and SwFBDATE indicates the current wave's spouse's birth year, month and date. They are taken from the spouse's values to RABYEAR, RABMONTH, RABDAY and RAFBDATE, respectively. CHARLS also asked spouse's birth month and birth day. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used. They are set to plain missing (.) if the respondent did not respond at a particular interview.

Note: There are few respondents that report their birth of year in very recent time (e.g.1997). These reports are considered valid as they are the spouses of age eligible respondents.

Cross Wave Differences in CHARLS

Starting in wave 2 CHARLS asks respondents to confirm their previous report of birth date. If respondent indicates the previous wave information is incorrect, CHARLS asks the respondent for the correct birth year, month and date. These cases are flagged with RAFBDATE.

Differences with the RAND HRS

Unlike HRS, CHARLS does not have a tracker file. We used the reported information from the core surveys to determine the best approximation birth year, month and day.

CHARLS Variables Used:

Wave 1:

BA002_1	Birth Year
BA002_2	Birth Month
BA002_3	Birth Day

Wave 2:

BA001_W2_1	we record your birth time is [birth time], is it right?
BA002_1	when were you born:year
BA002_2	when were you born:month
BA002_3	when were you born:day

Age at interview (in months and years)

Wave	Variable	Label	Type
1	R1AGEY	r0agey:w1 r age in years	Cont
2	R2AGEY	rlagey:w2 r age in years	Cont
1	S1AGEY	slagey:w1 s age in years	Cont
2	S2AGEY	s2agey:w2 s age in years	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
R1AGEY	17682	58.69	10.15	21.00	101.00
R2AGEY	18590	59.54	10.25	16.00	101.00
S1AGEY	14871	57.43	9.29	21.00	100.00
S2AGEY	14812	58.29	9.39	16.00	99.00

How Constructed:

RwAGEY is the respondent's age in years at the time of the current wave's interview. Respondent's age is calculated by respondent's birth year and month minus the interview year and month; furthermore, self-reported age is used if there is a missing value of calculated age. In the case that the respondent's birth month is missing RwAGEY is calculated assuming that the respondent's birth month is month 6 (June). RwAGEY is set to plain missing (.) for respondents who did not respond to any waves.

SwAGEY is the current wave's spouse's age in years at the time of the current wave's interview. SwAGEY is taken from the spouse's value to RwAGEY. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

Unlike the HRS, the CHARLS has two ways for respondents to report their age, either when the respondent was born or how old the respondent is at the current interview.

CHARLS Variables Used:

Wave 1:

BA002_1	Birth Year
BA002_2	Birth Month
BA004	Age
IMONTH	interview month
IYEAR	interview year

Wave 2:

BA002_1	when were you born:year
BA002_2	when were you born:month
BA004	your age
IMONTH	interview month
IYEAR	interview year

.v:sp nr	538	1360
0.no gender problem	14780	14716
1.gender prob, used health gender	107	98

How Constructed:

RAGENDER indicates the respondent's gender. The variable is set to 1 for male and 2 for female. RAGENDER is set to special missing (.m) when gender is reported as "missing."

Some respondents report inconsistent gender information between waves. In the case that gender is not consistent between waves or that gender in the Demographic module is missing, gender as separately determined for the Health module is used to determine RAGENDER. These cases are flagged with RAFGENDR.

RAFGENDR is a flag variable which indicates if the respondent's report of their gender changed between waves. A value of 0 indicates that the respondent's gender was consistent between waves. A value of 1 indicates the respondent's report of gender changed between waves and gender as separately determined for the Health module was used to determine RAGENDER.

SwGENDER and SwFGENDR indicate the current wave's spouse's gender and gender flag, respectively. They are taken from the spouse's values to RAGENDER and RAFGENDR. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

Unlike HRS, CHARLS does not have a tracker file. We used the reported information from core survey to determine the best approximation of the respondent's gender.

5.first stage of tertiary education	355	248

How Constructed:

RAEDUC_C identifies the highest level of education that respondents have attained. To account for the high prevalence of lower level of education, CHARLS provides additional lower education categories. RAEDUC_C is defined using the following codes: 1.No Formal Education (Illiterate), 2.Did Not Finish Primary School but can Read, 3.Sishu (Private Tutoring), 4.Elementary School; 5.Middle School, 6.High School, 7.Vocational School, 8.Two/three-year college, 9.College Grad and 10.Master's degree. Don't know, missing, or refused values of RAEDUC_C are assigned special missing codes .d, .m, .r, respectively.

In order to provide a harmonized measure of education across all countries, RAEDISCED categorizes education achievements using the International Standard Classification of Education ISCED codes. RAEDISCED identifies the latest non-missing report of education level by ISCED code.

RAEDISCED identifies the latest non-missing report of education level by ISCED code and was mapped to ISCED codes based on the advice in Classifying Educational Programs (OECD, 1999). Respondents who reported that they did not complete elementary or middle school are assigned ISCED code 1 under the assumption that respondents are likely to have at least completed primary education. For more information on ISCED codes see ISCED (United Nations Educational Scientific and Cultural Organizations, 1997). RAEDISCED is set to special missing (.m) when information is reported as "missing."

SwEDUC_C and SwEDISCED indicate the current wave's spouse's category of education. They are taken from the spouse's value to RAEDUC_C and RAEDISCED. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used. SwEDUC_C and SwEDISCED are set to plain missing (.) for respondents who did not respond to this waves.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

To account for the high prevalence of lower level of education, RAEDUC_C includes additional lower education categories from RAEDUC in the RAND HRS.

CHARLS Variables Used:

Wave 1:

BD001	HIGHEST LEVEL OF SCHOOL attained
Wave 2:	
BD001	the highest level of education attained now
BD001_W2_1	is the record of highest education level right
BD001_W2_3	what's the highest level of education in last wave
BD001_W2_4	have your highest level of education changed? if so, wha

Current Marital Status: With partnership

.v:sp nr	538	1360
1.married	13704	13997
3.partnered	1166	805

How Constructed:

RwMSTAT is created using reported marital status and implied partnership status. Partnership status is assigned to respondents who report being currently unmarried but who are coupled with another respondent through CHARLS's couple id.

RwMSTAT indicates a respondent's marital status in the current wave taking into account implied partnership. A code of 1 indicates that the respondent is married. A code of 3 indicates that the respondent is partnered, either through self-reported or implied partnership. A code of 4 indicates that the respondent is separated. A code of 5 indicates that the respondent is divorced. A code of 7 indicates that the respondent is widowed. A code of 8 indicates that the respondent has never been married. When respondents don't know or refuse to answer, RwMSTAT is assigned special missing values .d or .r, respectively. RwMSTAT is set to plain missing (.) for respondents who did not respond to the current wave.

SwMSTAT indicates the current wave's spouse's marital status. It is taken from the spouse's values to RwMSTAT. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

Starting wave 2, CHARLS introduces a new category "Cohabitated" and it's coded as "3.Partnership".

Differences with the RAND HRS

No differences known

CHARLS Variables Used:

Wave 1:

BE001	marital status
HOUSEHOLDID	Household ID
ID	Individual ID

Wave 2:

BE001	marital status

2.married, sp abs	114	215
3.partnered		11
4.separated	1	1
5.divorced		1
7.widowed	1	3

How Constructed:

RwMSTATH is created using reported marital status. While RwmSTAT, described above, specifically recode reported marital status with implied partnership, RwmSTATH provides the reported marital status in the current wave. A code of 1 indicates the respondent reports being married. A code of 2 indicates the respondent reports being married but not living with spouse temporarily. A code of 3 indicates that the respondent is partnered, either through self-reported or implied partnership. A code of 4 indicates the respondent reports being separated. A code of 5 indicates the respondent reports being divorced. A code of 7 indicates the respondent reports being widowed. A code of 8 indicates the respondent reports he/she has never been married. Don't know, refused, or other missing responses of RwmSTATH are assigned special missing codes .d, .r, .m respectively. RwmSTATH is set to plain missing (.) for respondents who did not respond to the current wave.

SwMSTATH indicates the current wave's spouse's marital status without partnership. It is taken from the spouse's value to RwmSTATH. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

Starting wave 2, CHARLS introduces a new category "Cohabitated" and it's coded as "3.Partnership".

Differences with the RAND HRS

No differences known.

CHARLS Variables Used:

Wave 1:	
BE001	marital status
Wave 2:	
BE001	marital status

Number of Marriage

Wave	Variable	Label	Type
1	R1MRCT	r1mrct:w1 r # marriages	Cont

1	S1MRCT	s1mrct:w1 s # marriages	Cont
2	S2MRCT	s2mrct:w2 s # marriages	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
R1MRCT	17667	1.04	0.25	0.00	6.00
R2MRCT	18569	1.24	0.50	0.00	5.00
S1MRCT	14863	1.04	0.22	0.00	6.00
S2MRCT	14793	1.26	0.49	0.00	5.00

How Constructed:

RwMRCT contains the number of times the respondent reported having been married. Don't know, missing, or refused values of RwMRCT are assigned special missing codes .d, .m, .r, respectively. RwMRCT is set to plain missing (.) for respondents who did not respond to the current wave.

SwMRCT is the number of marriages of the current wave's spouse. It is taken from the spouse's responses to RwMRCT. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

No differences known.

CHARLS Variables Used:

Wave 1:	
BE001	marital status
BE003	HOW MANY TIMES HAVE YOU BEEN MARRIED
Wave 2:	
BE001	marital status
BE003	how many times have you been married
BE003_W2_1	how many times have you been married since last interview
XRTYPE	r interview type

Length of Current Marriage

Wave	Variable	Label	Type

S2MCURLN	14248	35.25	10.60	0.00	79.00

How Constructed:

RwMCURLN records the length of the respondent's current marriage. RwMCURLN is calculated using the year the respondent reported getting married and the year of the current interview. Starting in Wave 2 if the respondent reports not starting any new marriages since the last interview RwMCURLN is derived by adding the number of years between the last interview and the current interview to the length of currently marriage determined for the previous wave. If the respondent is not currently married special missing .u is assigned. Don't know, missing, or refused values of RwMCURLN are assigned special missing codes .d, .m, .r, respectively. RwMCURLN is set to plain missing (.) for respondents who did not respond to the current wave.

SwMCURLN measures the length of the current wave's spouse's current marriage. It is taken from the spouse's value to RwMCURLN. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

Starting in Wave 2 if the respondent reports not starting any new marriages since the last interview, they are the respondent got married is not re-asked.

CHARLS Variables Used:

3.another village/neighborhood in other	1633	7401	7536
4.abroad	5	6610	6213
		840	1040
		4	4

How Constructed:

RABPLACE_C indicates the respondent's birthplace. A code of 1 indicates the respondent was born in the interview place. A code 2 indicates the respondent was born in another village/neighborhood, same or different county/city but same province as the interview place. A code of 3 indicates the respondent was born in another province than interview place. A code of 4 indicates the respondent was born abroad.

Don't know, missing, or refused responses to RABPLACE_C are assigned special missing codes .d, .m, .r, respectively.

SwBPLACE_C is the place of birth of the current wave's spouse. It is taken from the spouse's value to RABPLACE_C. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used. SwBPLACE_C is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

Unlike the HRS, CHALS birthplace's question contains 4 codes. A code of 1 indicates the respondent was born in the interview place and a code 2 indicates the respondent was born in another village/neighborhood, same or different county/city but same province as the interview place. A code of 3 indicates the respondent was born in another province than interview place. A code of 4 indicates the respondent was born abroad.

2.non-agricultural hukou	3127	3130
3.unified residence hukou	90	164
4.do not have hukou	10	6

How Constructed:

RwHUKOU indicates the respondent's hukou place and is a special identifier in China. Individuals who live in urban district may have a rural hukou and vice versa. Hukou status affects many other things like buying a house, buying a car, children's school enrollment and other welfare. A code of 1 indicates the respondent is agricultural hukou. A code of 2 indicates the respondent is non-agricultural hukou. A code of 3 indicates the respondent is unified residence hukou. Special missing value .n is assigned if the respondent doesn't have hukou. Don't know, missing, or refused responses to RwHUKOU are assigned special missing codes .d, .m, .r, respectively. RwHUKOU is set to plain missing (.) for respondents who did not respond to this wave.

SwHUKOU is the hukou status of the current wave's spouse. It is taken from the spouse's value to RwHUKOU. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

This question is not asked in the HRS as it is specific to China.

0.urban hukou	11640	11481

1.rural hukou		3217	3294
---------------	--	------	------

How Constructed:

RwRURAL indicates the respondent's living region. This variable is based on the information recorded in PSU file; that is, whether the region is rural or urban is defined by National Bureau of Statistics of the People's Republic of China. A code of 0 indicates the respondent is living in a rural region and a code of 1 indicates the respondent is living in an urban region.

RwRURAL2 identifies the respondent's living region by his/her hukou. A code of 0 indicates the respondent is having an urban hukou and a code of 1 indicates the respondent is having rural hukou.

Don't know, missing, or refused responses to RwRURAL and RwRURAL2 are assigned special missing codes .d, .m, .r, respectively. RwRURAL and RwRURAL2 are set to plain missing (.) for respondents who did not respond to this wave.

SwRURAL and SwRURAL2 are the live region of the current wave's spouse and are taken from the spouse's values to RwRURAL and RwRURAL2, respectively. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

RwRURAL2 is not available in RAND HRS as it is specific to China.

How Constructed:

CHARLS has two scales for respondents to self-report their current health condition; one is a scale ranging from 1 for Excellent to 5 for Poor, and the other is a scale ranging from 1 for Very Good to 5 for Very Bad. Respondents were asked their health status twice; once in the beginning of the health module and again in the end of the health module. In the beginning of the health module, respondents are randomly assigned into two groups, the first group of respondents are asked first scale in the beginning and second scale at the end. The second group of respondents are vice versa.

RwSHLT is the respondent's self-reported general health status using a scale ranging from 1 for Excellent to 5 for Poor. When respondents don't know, are missing, or refuse to answer, RwSHLT is assigned special missing values .d, .m, or .r, respectively. RwSHLT is set to plain missing (.) for respondents who did not respond to this wave.

Self-reported general health status on a scale from Excellent to Poor is asked either at the beginning or in the end of the Health module. RwSHLTF indicates this timing. Specifically, a code of 1 indicates that the respondent was asked RwSHLT at the beginning of the module. A code of 2 indicates that the respondent was asked RwSHLT at the end of the module. RwSHLTF is set to plain missing (.) for respondents who did not respond to this wave.

SwSHLT is the respondent's spouse's self-reported general health status taken directly from the spouse's RwSHLT. SwSHLTF indicates whether the respondent's spouse was asked SwSHLT at the beginning or at the end of the module and is taken directly from the spouse's RwSHLTF. In addition to the special missing codes used in RwSHLT and RwSHLTF, SwSHLT and SwSHLTF employ the special missing value .u, when the respondent did not report being coupled in the current wave, and the special missing value .v, when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSHLTA is the respondent's self-reported general health status ranging from 1 for Very Good to 5 for Very Bad. Don't know, are missing, or refuse to answer, RwSHLTA is assigned special missing values .d, .m, or .r, respectively. RwSHLTA is set to plain missing (.) for respondents who did not respond to this wave.

SwSHLTA is the respondent's spouse's self-reported general health status taken directly from the spouse's RwSHLTA. In addition to the special missing codes used in RwSHLTA, SwSHLTA employs the special missing value .u, when the respondent does not report being coupled in the current wave, and the special missing value .v, when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Self-reported general health status on a scale from Very Good to Very Bad is asked either at the beginning or in the end of the Health module. RwSHLTAF indicates this timing. A code of 1 indicates that the respondent was asked RwSHLTA at the beginning of the module. A code of 2 indicates that the respondent was asked RwSHLTA at the end of the module. RwSHLTAF is set to plain missing (.) for respondents who did not respond to this wave.

SwSHLTAF indicates whether the respondent's spouse was asked SwSHLTA at the beginning or in the end of the health module and is taken directly from the spouse's RwSHLTAF. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

Due to routing error that was happened in the wave 1 questionnaire, some respondents answered the second scale of self-reported general health status twice and did not answer the first scale of self-reported general health status. In the case that respondents have two reports of the second scale of self-reported health status only the first report at the beginning of the health module is used in RWSHLTA.

Differences with the RAND HRS

Unlike the HRS, CHARLS varied when the respondent was asked RWSHLT inside the health module. R1SHLTF indicates this timing.

Unlike the HRS, CHARLS also employs a second scale of self-reported general health status. RWSHLTA is the respondent's self-reported general health status using a scale ranging from Very Good to Very Poor.

CHARLS Variables Used:

Wave 1:

DA001	Self Comment of Your Health
DA002	Self Comment of Your Health
DA079	Self Comment of Your Health By Comparing With Others
DA080	Self Comment of Your Health

Wave 2:

DA001	self assessed health status (excellent)
DA002	self assessed health status (very good)
DA079	health status(self)
DA080	self comment of your health

How Constructed:

RwHLTHLM_C indicates whether an impairment or health problem limits the kind or amount of work for the respondent.

RwHLTHLM_C is derived from a set of questions in CHARLS from employment section:

These are the questions:

1. When was the longest time period that you stopped working? And the reason was due to health problems?

2. For household agricultural work, how many days of work did you miss last year due to health problems?

3. For employed non-agricultural work, how many days of work did you miss at this current job in the past year due to health problems?

4. For self-employed non-agricultural work and unpaid family business, how many days of work did you miss in the past year due to health problems?

5. Why did you leave the last job employer? And the reason was due to health problems?

If respondent gives a non-zero answer to any of the questions in above, we code the person as 1 indicating that an impairment or health problem limits the kind or amount of work for the respondent. A code 0 indicates the respondent reports no impairment or health problem that limits the kind or amount of work.

Don't know, refused, or other missing values for Rwhlthlm_C are assigned to special missing codes .d, .r, .m, respectively. Rwhlthlm_C is set to a special code (.w) if the respondent is not working. Rwhlthlm_C is set to plain missing (.) for respondents who did not respond to this wave.

Swhlthlm_C is the respondent's spouse's self-reported limitation in his or her ability to work because of health problems. It was taken directly from the spouse's Rwhlthlm_C. Swhlthlm_C employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

In the HRS, the question is asked in the health module and directly ask "Do you have any impairment or health problem that limits the kind or amount of paid work you can do?"

Unlike the HRS, the CHARLS asks respondents how many days of work does a respondent miss due to health problem in different type of works and the questions are asked in the employment section.

CHARLS Variables Used:

Wave 1:

FA001	ENGAGE IN AGRICULTURAL WORK FOR MORE THAN 10 DAYS
FA002	WORK FOR AT LEAST ONE HOUR LAST MONTH
FA003	HAVE A JOB BUT ARE TEMPORARILY LAID-OFF, ON SICK OR OTHE
FA005	DO YOU EXPECT TO GO BACK TO THIS JOB
FA007	HAVE YOU EVER WORKED FOR AT LEAST A FEW MONTHS
FA008	HAVE YOU EVER WORKED FOR AT LEAST A FEW MONTHS
FB010	THE REASON FOR INTERRUPTIONS
FC013	THE NUMBER OF DAYS MISSING LAST YEAR DUE TO HEALTH PROBL
FD030	THE NUMBER OF DAYS OF WORK YOU MISSED
FH004	DAYS MISSING FOR HEALTH PROBLEMS
FL020S7	THE REASON FOR LEAVING

Wave 2:

FA001	engage in agricultural work for more than 10 days
FA002	work for at least one hour last month
FA003	have a job but are temporarily laid-off, on sick or othe
FA005	do you expect to go back to this job
FA007	ever work 3 months
FA008	sure never work 3 months
FB010	reason of stop
FC013	days no work due to health problems
FD030	days of sick leave
FH004	days of sick leave

FL020S7 why did you leave that employer? health reasons

How Constructed:

These variables recode raw data about the difficulty with activities of daily living (ADLs). These questions are not asked to respondents who are younger than 50 and report good health as jointly defined by self-report of health, pains in the chest, disabilities, and chronic conditions. The ADLs include dressing (RwDRESSA), bathing and showering (RwBATHA), eating (RwEATA), getting in and out of bed (RwBEDA), and using the toilet (RwTOILTA).

A code of 0 indicates that the respondent did not report any problems with the activity. A code of 1 indicates that the respondent reported some difficulty with the activity or could not do the activity. Don't know, refused, or other missing responses to RwDRESSA, RwBATHA, RwEATA, RwBEDA, and RwTOILTA are assigned special missing values .d, .r, .m respectively. RwDRESSA, RwBATHA, RwEATA, RwBEDA, and RwTOILTA are set to special missing .a if the activities of daily living questions were skipped as to respondent who is younger than 50 and was healthy. RwDRESSA, RwBATHA, RwEATA, RwBEDA, and RwTOILTA are set to plain missing (.) for respondents who did not respond to this wave.

SwDRESSA, SwBATHA, SwEATA, SwBEDA, and SwTOILTA indicate whether the respondent's spouse reported any difficulty and are taken directly from the spouse's RwDRESSA, RwBATHA, RwEATA, RwBEDA, and RwTOILTA, respectively. In addition to the special missing codes used in RwDRESSA, RwBATHA, RwEATA, RwBEDA, and RwTOILTA, SwDRESSA, SwBATHA, SwEATA, SwBEDA, and SwTOILTA employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

In the RAND HRS the binary indicators of some difficulty with ADL's are recoded from "no", "yes" or "can't do". If respondent answers "yes" or "can't do" to the any difficulty question, these variable are set to 1 for some difficulty. If respondent answers "no", these variables are set to 0 for no difficulty.

In the CHARLS, these variables are recoded from "1.No, I don't have any difficulty", "2.I have difficulty but can still do it", "3.Yes, I have difficulty and need help" and "4.I can not do it". If respondent answers "2", "3" or "4" to any difficult question, these variables are set to 1 for some difficulty. If respondent answers "1", these variables are set to 0 for no difficulty.

Unlike the HRS, CHARLS does not include walk across the room in their ADL questions and exclude any difficulty that will last less than 3 months.

CHARLS Variables Used:

Wave 1:

DB001	Have Difficulty Running or Jogging About 1 Km
DB003	Have Difficulty Walking 100 Metres
DB004	Have Difficulty Getting Up From A Chair After Sitting fo
DB005	Have Difficulty Climbing Several Flights of Stairs Witho
DB006	Have Difficulty Stooping,Kneeling,or Crouching
DB007	Have Difficulty Reaching or Extending Your Arms Above Sh
DB008	Have Difficulty Lifting or Carrying Weights Over 10 Jin
DB009	Have Difficulty Picking Up A Small Coin From A Table
DB010	Have Any Difficulty With Dressing Because of Health And
DB011	Have Any Difficulty With Bathing or Showering
DB012	Have Any Difficulty With Eating Because of Health And Me
DB013	Have Any Difficulty With Getting Out of Bed and Walking
DB014	Have Any Difficulty With Using the Toilet,Getting Up and

Wave 2:

DB001	running or jogging about 1 km
DB002	walkinf 1 km
DB003	walking 100 metres
DB004	difficulty with sitting
DB005	difficulty with climbing
DB006	difficulty with stooping, kneeling, crouching
DB007	difficulty with reaching or extending
DB008	difficulty with lifting
DB009	difficulty with picking up
DB010	difficulty with dressing
DB011	difficulty with bathing or showering
DB012	difficulty with eating
DB013	difficulty with getting into or out of bed
DB014	difficulty with using the toilet

How Constructed:

These variables recode raw data about the difficulty with instrumental activities of daily living (IADLs). These questions are not asked to respondents who are younger than 50 and report good health as jointly defined by self-report of health, pains in the chest, disabilities, and chronic conditions or to respondents who no difficulty jogging, getting up from chair, climbing, stooping, reaching, lifting/carrying, and picking up a coin.

The IADLs include managing money (RwMONEYA), taking medications (RwMEDSA), shopping for groceries (RwSHOPA), preparing meals (RwMEALSA), cleaning house (RwHOUSEWKA) and making phone calls (RwPHONEA). A code of 0 indicates that the respondent did not report any problems with the instrumental activity or that the respondent was not asked the question because they previously reported no difficulty jogging, getting up

from chair, climbing, stooping, reaching, lifting/carrying, and picking up a coin. A code of 1 indicates that the respondent reported some difficulty with the instrumental activity or could not do the activity. RWMEDSA, RWMONEYA, RWSHOPA, RWMELSA, RWHOUSEWKA and RWPHONEA are set to special missing .a if the activities of daily living questions were skipped as to respondent who is younger than 50 and was healthy. Don't know, refused, or other missing responses to RWMEDSA, RWMONEYA, RWSHOPA, RWMELSA, RWHOUSEWKA and RWPHONEA are assigned special missing values .d, .r, .m respectively. Special missing .n is assigned to RWPHONEA if a respondent has no phone. RWMEDSA, RWMONEYA, RWSHOPA, RWMELSA, RWHOUSEWKA and RWPHONEA are set to plain missing (.) for respondents who did not respond to this wave.

SwMONEYA, SwMEDSA, SwSHOPA, SwMELSA, SwHOUSEWKA and SwPHONEA indicate whether the respondent's spouse reported any difficulty and are taken directly from the spouse's RWMONEYA, RWMEDSA, RWSHOPA, RWMELSA, RWHOUSEWKA and RWPHONEA respectively. In addition to the special missing codes used in RWMONEYA, RWMEDSA, RWSHOPA, RWMELSA, RWHOUSEWKA and RWPHONEA, SwMONEYA, SwMEDSA, SwSHOPA, SwMELSA, SwHOUSEWKA and SwPHONEA employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

Questions related to making telephone calls are asked in wave 2 questionnaire only.

Differences with the RAND HRS

In the RAND HRS the binary indicators of some difficulty with ADL's are recoded from "no", "yes" or "can't do". If respondent answers "yes" or "can't do" to the any difficulty question, these variable are set to 1 for some difficulty. If respondent answers "no", these variables are set to 0 for no difficulty.

In the CHARLS, these variables are recoded from "1.No, I don't have any difficulty", "2.I have difficulty but can still do it", "3.Yes, I have difficulty and need help" and "4.I can not do it". If respondent answers "2", "3" or "4" to any difficult question, these variables are set to 1 for some difficulty. If respondent answers "1", these variables are set to 0 for no difficulty.

CHARLS Variables Used:

Wave 1:

DB016	Have Any Difficulty With Doing Household Chores
DB017	Have Any Difficulty With Preparing Hot Meals
DB018	Have Any Difficulty With Shopping Because of Health And
DB019	Have Any Difficulty With Managing Assets Because of Heal
DB020	Have Any Difficulty With Taking Medications Because of H

Wave 2:

DB016	difficulty with doing household chores
DB017	difficulty with preparing hot meals
DB018	difficulty with shopping for groceries
DB019	difficulty with managing your money
DB020	difficulty with taking medications
DB035	difficulties with making phone calls?

Other Functional Limitations: Some difficulty

How Constructed:

These variables indicate respondent has difficulty in functional limitations other than ADLs and IADLs. These questions are not asked to respondents who are younger than 50 and report good health as jointly defined by self-report of health, pains in the chest, disabilities, and chronic conditions. The other functional limitations include running or jogging 1KM (RwJOGA), walking 1KM (RwWALK1KMA), walking 100 (RwWALK100A), getting up from a chair after sitting for long periods (RwCHAIRA), climbing several flights of stairs without resting (RwCLIMSA), stooping kneeling, or crouching (RwSTOOPA), lifting or carrying weights over 10 jins (RwLIFTA), picking up a coin from the table (RwDIMEA), and reaching arms above shoulder level (RwARMSA).

A code of 0 indicates that the respondent did not report any problems with the activity. A code of 1 indicates that the respondent reported some difficulty with the activity or could not do the activity. Don't know, refused, or other missing responses to RwJOGA, RwWALK1KMA, RwWALK100A, RwCHAIRA, RwCLIMSA, RwSTOOPA, RwLIFTA, RwDIMEA, and RwARMSA are assigned special missing values .d, .r, .m respectively. RwJOGA, RwWALK1KMA, RwWALK100A, RwCHAIRA, RwCLIMSA, RwSTOOPA, RwLIFTA, RwDIMEA, and RwARMSA are set to special missing (.a) if the functional limitations questions were skipped because a respondent is less than 50 years old and healthy.

Questions about activities are skipped based on the answer of difficulty in jogging a kilometer. If a respondent reports no difficulty in jogging a kilometer, then the questions about walking 1KM and walking 100 M are skipped and RwWALK1KMA and RwWALK100A are set to 0 for no difficulty.

SwJOGA, SwWALK1KMA, SwWALK100A, SwCHAIRA, SwCLIMSA, SwSTOOPA, SwLIFTA, SwDIMEA, and SwARMSA indicate whether the respondent's spouse reported any difficulty and are taken directly from the spouse's responses to RwJOGA, RwWALK1KMA, RwWALK100A, RwCHAIRA, RwCLIMSA, RwSTOOPA, RwLIFTA, RwDIMEA, and RwARMSA, respectively. In addition to the special missing codes used in RwJOGA, RwWALK1KMA, RwWALK100A, RwCHAIRA, RwCLIMSA, RwSTOOPA, RwLIFTA, RwDIMEA, and RwARMSA, SwJOGA, SwWALK1KMA, SwWALK100A, SwCHAIRA, SwCLIMSA, SwSTOOPA, SwLIFTA, SwDIMEA, and SwARMSA employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

In the RAND HRS the binary indicators of some difficulty with ADL's are recoded from "no", "yes" or "can't do". If respondent answers "yes" or "can't do" to the any difficulty question, these variable are set to 1 for some difficulty. If respondent answers "no", these variables are set to 0 for no difficulty.

In the CHARLS, these variables are recoded from "1.No, I don't have any difficulty", "2.I have difficulty but can still do it", "3.Yes, I have difficulty and need help" and "4.I can not do it". If respondent answers "2", "3" or "4" to any difficult question, these variables are set to 1 for some difficulty. If respondent answers "1", these variables are set to 0 for no difficulty.

The unit in CHARLS for lifting or carrying weights is in jin, which is a traditional Chinese unit of mass that used across East and Southeast Asia. The conversion between jin to pounds is 1 to 1.1 and the conversion between jin to gram is 1 to 500.

Unlike the HRS, CHARLS asked respondent to exclude any difficulty that will last less than 3 months.

How Constructed:

Two Activities of Daily Living (ADL) summaries are derived. One uses the ADLs proposed Wallace and Herzog in their paper (Wallace and Herzog, 1995) to define an ADL summary (RwADLWA): bathe, dress, and eat. The second includes these and adds getting in/out of

bed (RwADLA_C). In all waves the "some difficulty" versions of the individual measures are used to construct these measures, i.e., RwbATHA, RwdRESSA, RweATA and RwbEDA. Each limitation adds one to the summary measure, that is:

$RwADLA_C = \text{sum}(RwbATHA, RwdRESSA, RweATA, RwbEDA)$. RwaDLAM_C is the number of ADL questions with missing values. RwaDLA_C is calculated for all respondents who answered at least one of the ADL component questions.

$RwADLWA = \text{sum}(RwbATHA, RwdRESSA, RweATA)$. RwaDLWAM is the number of ADL questions with missing values. RwaDLWA is calculated for all respondents who answered at least one of the ADL component questions.

RwADLA_C, RwaDLWA, RwaDLAM_C and RwaDLWAM are set to plain missing (.) for respondents who did not respond to this wave.

SwADLA_C and SwaLDWA are the respondent's spouse's summaries and are taken directly from the spouse's responses to RwaDLA_C and RwaDLWA, respectively. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

SwADLAM_C and SwaDLWAM are taken directly from the spouse's values of RwaDLAM_C and RwaDLWAM, respectively. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please see "Activities of Daily Living (ADLs): Some difficulty" for a description of how the individual dummy variables (RwbATHA, RwdRESSA, RweATA and RwbEDA) are constructed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

Unlike the HRS, CHARLS does not include walk across the room in their ADL questions. RwaDLA_C is range 0-4 that does not include RwaWALKA.

IADL Summary: sum IADLs where respondent reports any difficulty

S2IADLZAM	14819	0.09	0.47	0.00	5.00

How Constructed:

Two Instrumental Activities of Daily Living (IADL) summaries are derived. One (RwIADLA) summarizes the commonly used IADLs, using the phone, managing money, and taking medications. The second (RwIADLZA) summarizes these tasks and adds these other commonly used IADLs: shopping for groceries and preparing hot meals. All of these summary measures use the "some difficulty" versions of the individual items. Each limitation adds one to the summary measure, that is:

RwIADLA = sum (RwPHONEA, RwMONEYA, RwMEDSA). RwIADLAM is the number of IADL questions with missing values, ranging from 0 to 3. RwIADLA is calculated for all respondents who answered at least one of the IADL component questions.

RwIADLZA = sum (RwPHONEA, RwMONEYA, RwMEDSA, RwSHOPA, RwMEALA). RwIADLZAM is the number of IADL questions with missing values, ranging from 0 to 5. RwIADLZA is calculated for all respondents who answered at least one of the IADL component questions.

SwIADLA and SwIADLZA are taken directly from the spouse's values of RwIADLA and RwIADLZA, respectively. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when

the respondent reports being coupled in the current wave but their spouse is not interviewed.

SwIADLAM and SwIADLZAM are taken directly from the spouse's values of RwiADLAM and RwiADLZAM, respectively. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please see "Instrumental Activities of Daily Living (IADLs): Some difficulty" for a description of how the individual dummy variables (RwPHONEA, RwmONEYA, RwmEDSA, RwsHOPA, and RwmEALA) are constructed.

Cross Wave Differences in CHARLS

These two Instrumental Activities of Daily Living (IADL): RwiADLA and RwiADLZA are only available in wave 2. In wave 1, there is no question regarding using the phone.

Differences with the RAND HRS

Unlike the HRS, CHARLS does not include the instrumental activities of daily living (IADLs) regarding using phone in wave 1.

How Constructed:

RwDEPRESL, RweFFORTL, RwsLEEPRL, RwwHAPPYL, RwFLONEL, RwbOTHERL, RwGOINGL, RwmINDTSL, RwfHOPEL and RwfEARLL record the frequency of the respondent's feeling over the week prior to the interview. RwDEPRESL indicates whether the respondent was feeling depressed. RweFFORTL indicates whether the respondent was feeling that everything was an effort. RwsLEEPRL indicates whether the respondent's sleep was restless. RwwHAPPYL indicates whether the respondent felt happy. RwFLONEL indicates whether the respondent felt lonely. RwbOTHERL indicates whether the respondent bothered by thing that don't usually bother me. RwGOINGL indicates whether the respondent felt he/she could not get going. RwmINDTSL indicates whether the respondent has trouble keeping my mind on what I was doing. RwfHOPEL indicates whether the respondent felt hopeful about the future. RwfEARLL indicates whether the respondent felt fearful.

A code of 1 indicates that the respondent experienced the particular feeling rarely or none (less than once a day). A code of 2 indicates the respondent experienced the particular feeling some or a little of the time (1-2 days). A code of 3 indicates the respondent experienced the particular feeling occasionally or moderate amount of time (3-4 days). A code of 4 indicates the respondent experienced the particular feeling most or all of the time (5-7 days). Don't know, refused, or other missings values or RwDEPRESL, RweFFORTL, RwsLEEPRL, RwwHAPPYL, RwFLONEL, RwbOTHERL, RwGOINGL, RwmINDTSL, RwfHOPEL and RwfEARLL are assigned special missing codes .d, .r, .m, respectively. RwDEPRESL, RweFFORTL, RwsLEEPRL, RwwHAPPYL, RwFLONEL, RwbOTHERL, RwGOINGL, RwmINDTSL, RwfHOPEL and RwfEARLL are set to special missing (.p) if the mental health questions were skipped because the interview was by proxy. RwDEPRESL, RweFFORTL, RwsLEEPRL, RwwHAPPYL, RwFLONEL, RwbOTHERL, RwGOINGL, RwmINDTSL, RwfHOPEL and RwfEARLL are set to plain missing (.) for respondents who did not respond to this wave.

SwDEPRESL, SweFFORTL, SwsLEEPRL, SwWHAPPYL, SwFLONEL, SwBOTHERL, SwGOINGL, SwMINDTSL, SwFHOPEL and SwFEARLL indicate whether the respondent's spouse reported any feelings and are taken directly from the spouse's responses to RwDEPRESL, RweFFORTL, RwsLEEPRL, RwwHAPPYL, RwFLONEL, RwbOTHERL, RwGOINGL, RwmINDTSL, RwfHOPEL and RwfEARLL, respectively. In addition to the special missing codes used in RwDEPRESL, RweFFORTL, RwsLEEPRL, RwwHAPPYL, RwFLONEL, RwbOTHERL, RwGOINGL, RwmINDTSL, RwfHOPEL and RwfEARLL, SwDEPRESL, SweFFORTL, SwsLEEPRL, SwWHAPPYL, SwFLONEL, SwBOTHERL, SwGOINGL, SwMINDTSL, SwFHOPEL and SwFEARLL employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwCESD10 is the sum of the ten questions, after reverse coding RwfHOPEL and RwwHAPPYL. Additionally, the scales for each of the ten questions were adjusted so that the anchors were 0 to 3, rather than 1 to 4. RwCESD10 ranges from 0 to 30 with higher scores indicating that the respondent felt more negative feelings during the past week.

SwCESD10 gives this information for the respondent's spouse or partner. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwCESD10M indicates how many individual measures used to derive RwCESD10 are missing.

SwCESD10M indicates how many individual measures used to derive SwCESD10 are missing. SwCESD10M is taken directly from the spouse's values of RwCESD10M. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

In the CHARLS, CESD questions are asked using a 4 point scale which correspond to the frequency of respondent's feeling in the past week. All but the first wave of the HRS respondents were asked CESD questions as yes and no.

Unlike the HRS, the CHARLS does not include a question asking respondents whether they felt sad or enjoyed life. Four additional variables which are not included in the HRS are included in the CHARLS that asked about bothered by little thing, had trouble keeping mind on what is doing, feel hopeful about the future and feel fearful.

While the RAND HRS uses an 8-item version of the CESD scale, the CHARLS version of the CESD scale was validated with 10-items. RwCESD10 is based on the 10 CHARLS CESD questions which, unlike the RAND HRS measure RwCESD doesn't include a question about everything was feeling like an effort and does include three additional questions: RwFEARL, RwKEMINDL, RwBOTHERL. Because of the difference in the number of questions used for the summary measure and the use of a 4-point scale for each question, RwCESD10 ranges from 0-30 unlike the RAND HRS RwCESD which ranges from 0-8.

CHARLS Variables Used:

Wave 1:

DB032	How Often Did the Respondent Receive Assistance
DC009	Bothered by Things
DC010	Had Trouble Keeping Mind
DC011	Felt Depressed
DC012	Felt Everything I Did Was An Effort
DC013	Felt Hopeful About the Future
DC014	Felt fearful
DC015	Sleep Was Restless
DC016	Happy
DC017	Felt Lonely
DC018	Could Not Get Going

Wave 2:

DB032	receive assistance
DC009	bothered by things
DC010	had trouble keeping mind
DC011	felt depressed
DC012	i felt everything i did was an effort.
DC013	i felt hopeful about the future.
DC014	i felt fearful.
DC015	my sleep was restless.
DC016	i was happy.
DC017	i felt lonely.
DC018	i could not get

How Constructed:

RwHIBPE, RwdIABE, RwcANCRe, RwlUNGE, RwhEARTE, RwsTROKE, RwpSYCHE, RwaRTHRE, RwdYSLIPE, RwlIVERE, RwkIDNEYE, RwdIGESTE and RwaSTHMAE indicate the respondent's answer to the question regarding whether or not a doctor has told the respondent he/she had a specific condition.

A code of 0 indicates that the respondent does not report having been told by a doctor he/she has the condition. A code of 1 indicates that the respondent reports having been told by a doctor he/she has the condition. This positive report can either be based on a report in the current wave or based on a respondent's previous report of the condition which they confirm in the current wave. Don't know, missing, or refused values of RwhIBPE, RwdIABE, RwcANCRe, RwlUNGE, RwhEARTE, RwsTROKE, RwpSYCHE, RwaRTHRE, RwdYSLIPE, RwlIVERE, RwkIDNEYE, RwdIGESTE and RwaSTHMAE are assigned special missing codes .d, .m, .r, respectively. RwhIBPE, RwdIABE, RwcANCRe, RwlUNGE, RwhEARTE, RwsTROKE, RwpSYCHE, RwaRTHRE, RwdYSLIPE, RwlIVERE, RwkIDNEYE, RwdIGESTE and RwaSTHMAE are set to plain missing (.) for respondents who did not respond to this wave.

RwHIBPE indicates whether the respondent reported having hypertension.

RwdIABE indicates whether the respondent reported having diabetes or high blood sugar.

RwcANCRe indicates whether the respondent reported having cancer or a malignant tumor (excluding minor skin cancers).

RwlUNGE indicates whether the respondent reported having chronic lung disease such as chronic bronchitis or emphysema.

RwhEARTE indicates whether the respondent reported having heart attack, coronary heart disease, angina, congestive heart failure, or other heart problems. RwhEARTE indicates whether the respondent reported any of these conditions.

RwsTROKE indicates whether the respondent reported having a stroke.

RwpSYCHE indicates whether the respondent reported having any emotional, nervous, or psychiatric problems.

RwaRTHRE indicates whether the respondent reported having arthritis.

RwdYSLIPE indicates whether the respondent reported ever having dyslipidemia (elevation of low density lipoprotein, triglycerides (TGs), and total cholesterol, or a low high density lipoprotein level).

RwlIVERE indicates whether the respondent reported having any liver disease (except fatty liver, tumors, and cancer).

RwkIDNEYE indicates whether the respondent reported having any kidney disease (except for tumor or cancer).

RwdIGESTE indicates whether the respondent reported having any stomach or other digestive disease (except for tumor or cancer).

RwaSTHMAE indicates whether the respondent reported having asthma.

SwHIBPE, SwDIABE, SwCANCRe, SwLUNGE, SwHEARTE, SwSTROKE, SwPSYCHE, SwARTHRE, SwDYSLIPE, SwLIVERE, SwKIDNEYE, SwDIGESTE, and SwASTHMAE indicate whether the respondent's spouse reported ever being told by a doctor he/she has any of these conditions and are taken directly from the spouse's RwhIBPE, RwdIABE, RwcANCRe, RwlUNGE, RwhEARTE, RwsTROKE, RwpSYCHE, RwaRTHRE, RwdYSLIPE, RwlIVERE, RwkIDNEYE, RwdIGESTE and RwaSTHMAE, respectively. In addition to the special missing codes used in RwhIBPE, RwdIABE, RwcANCRe, RwlUNGE, RwhEARTE, RwsTROKE, RwpSYCHE, and RwaRTHRE, SwHIBPE, SwDIABE, SwCANCRe, SwLUNGE, SwHEARTE, SwSTROKE, SwPSYCHE, SwARTHRE, SwDYSLIPE, SwLIVERE, SwKIDNEYE, SwDIGESTE, and SwASTHMAE employ two other missing

codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

Starting in Wave 2, re-interview respondents were asked to confirm whether have had or had not had each condition based on their previous report. If the respondent disputes the previous report, re-interview respondent are then asked whether they have been diagnosed with the condition since the last interview. Currently disputes of previous reports are not incorporated into RWHIBPE, RWDIABE, RWCANCRE, RWLUNGE, RWEHARTE, RWSTROKE, RWPSYCHE, RWARTHRE, RWDYSLIPE, RWLIVERE, RWKIDNEYE, RWDIGESTE and RWASTHMAE but previous reports of a condition are not carried forward to a wave in which the previous report is disputed.

Differences with the RAND HRS

Unlike the HRS, the CHARLS includes 5 more chronic disease questions for the respondent to answer: dyslipidemia, liver disease, kidney disease, stomach or other digestive disease, and asthma.

Unlike the RAND HRS, disputes of previously reported conditions are not currently incorporated into RWHIBPE, RWDIABE, RWCANCRE, RWLUNGE, RWEHARTE, RWSTROKE, RWPSYCHE, RWARTHRE, RWDYSLIPE, RWLIVERE, RWKIDNEYE, RWDIGESTE and RWASTHMAE in the Harmonized CHARLS.

.v:sp nr	538	1360
0.no	14582	14416
1.yes	205	213

How Constructed:

RwMEMRYE indicates the respondent's response to the question regarding whether or not a doctor has told the respondent he/she has a memory related condition. A code of 0 indicates that the respondent does not report having been told by a doctor. A code of 1 indicates that the respondent reports having been told by a doctor they have the condition. This positive report can either be based on a report in the current wave or based on a respondent's previous report of a memory related disease which they confirm in the current wave. Don't know, missing, or refused values of RwMEMRYE are assigned special missing codes .d, .m, .r, respectively. RwMEMRYE is set to plain missing (.) for respondents who did not respond to this wave.

SwMEMRYE indicates whether the respondent's spouse reported ever being told by a doctor he/she has either of these conditions and is taken directly from the spouse's values to RwMEMRYE. In addition to the special missing codes used in RwMEMRYE, SwMEMRYE employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

Starting in Wave 2, re-interview respondents were asked to confirm whether have had or had not had a memory related condition based on their previous report. If the respondent disputes the previous report, re-interview respondent are then asked whether they have been diagnosed with a memory related condition since the last interview. Currently disputes of previous reports are not incorporated into RwMEMRYE but previous reports of a memory related condition are not carried forward to a wave in which the previous report is disputed.

Differences with the RAND HRS

Unlike the RAND HRS, disputes of previously reported memory related conditions are not currently incorporated into RwMEMRYE in the Harmonized CHARLS.

CHARLS Variables Used:

Wave 1:

DA007_12_ Memory-Related Disease

Wave 2:

DA007_12_ have been diagnosed of disease

DA007_W2_1_12_ verify disease record

DA007_W2_2_12_ doctor told disease

XRTYPE r interview type

ZDA007_12_ chronic disease

BMI

Wave	Variable	Label	Type
1	R1BMI	r1bmi:w1 body mass index=kg/m2	Cont
1	S1BMI	slbmi:w1 body mass index=kg/m2	Cont
1	R1HEIGHT	rlheight:w1 height in meters	Cont
1	S1HEIGHT	slheight:w1 height in meters	Cont
1	R1WEIGHT	rlweight:w1 weight in kilograms	Cont
1	S1WEIGHT	slweight:w1 weight in kilograms	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
R1BMI	13617	23.47	3.94	9.52	63.05
S1BMI	11593	23.60	3.90	9.52	63.05
R1HEIGHT	13684	1.58	0.09	1.08	1.87
S1HEIGHT	11638	1.59	0.08	1.08	1.87
R1WEIGHT	13725	58.80	11.83	21.10	162.00
S1WEIGHT	11677	59.50	11.69	21.10	162.00

How Constructed:

RwHEIGHT, RwWEIGHT, and RwBMI are the respondent's measured height, measured weight, and calculated body mass index, respectively.

Height is given in meters, weight in kilograms, and bmi is weight divided by the square of height. If the height value is between 1 and 2, height is assumed to be given in meters. If the height value is between 100 and 200, height is assumed to be given in centimeters. RwHEIGHT is set to special missing value .i if the height value is greater than 2 but less than 100 as it is considered an invalid measurement. RwWEIGHT is set to special missing value .i if the weight value is 20 or less as it is considered an invalid measurement. Don't know, missing, or refused values of RwHEIGHT, RwWEIGHT, and RwBMI are assigned special missing codes .d, .m, .r, respectively. RwHEIGHT, RwWEIGHT, and RwBMI are set to plain missing (.) for respondents who did not respond to this wave.

SwHEIGHT, SwWEIGHT, and SwBMI are taken directly from the spouse's measures in RwHEIGHT, RwWEIGHT, and RwBMI. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

Wave 2 biomarker file has not yet been released.

Differences with the RAND HRS

Unlike the CHARLS, the HRS respondents are asked to self-report their height and weight. In the CHARLS height and weight are measured by the interviewer.

CHARLS Variables Used:

Wave 1:

QI002	height	
QL002	Weight	Measuremen

How Constructed:

RwVGACT_C, RwMDACT_C, and RwLTACT_C indicate whether respondent has any vigorous, moderately energetic, or mildly energetic physical activity at least 10 minutes every week, respectively. A code of 1 indicates the respondent reported taking part in the given level of physical activity more than 10 minutes a week. A code of 0 indicates the respondent reported could not take part in the given level of physical activity more than 10 minutes a week. These questions were only asked to a random subsample of half the sample. Don't know, missing, or refused values of RwVGACT_C, RwMDACT_C, and RwLTACT_C are assigned special missing codes .d, .m, .r, respectively. RwVGACT_C, RwMDACT_C, and RwLTACT_C are set to plain missing (.) for respondents who did not respond to this wave.

RwVGACTX_C, RwMDACTX_C, and RwLTACTX_C indicate number of days of vigorous, moderately energetic, or mildly energetic physical activity at least 10 minutes every week, respectively. If the respondent reported doing less than 10 minutes of the specific level of physical activity per week, RwVGACTX_C, RwMDACTX_C, and RwLTACTX_C are set to 0, for 0 days a week. These questions were only asked to a random subsample of half the sample. Don't know, or refused values of these variables are assigned special missing codes .d, .r, respectively. RwVGACTX_C, RwMDACTX_C, and RwLTACTX_C are set to plain missing (.) for respondents who did not respond to this wave.

SwVGACT_C, SwMDACT_C, SwLTACT_C, SwVGACTX_C, SwMDACTX_C, and SwLTACTX_C indicate the respondent's spouse's frequency of the given levels of physical activity and are taken directly from spouse's responses. In addition to the special missing codes .d and .r, these variables employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

The HRS asks the frequency and time of physical or exercise in last 12 months. Unlike the HRS, the CHARLS only asks whether the respondent take vigorous, moderate or light physical activity or exercise at least 10 minutes every week and number of days he/she exercises if any. CHARLS also only asks these questions to a random subsample of half the sample.

CHARLS Variables Used:

DA051_1_	Y/N Do Vigorous Activities At Least 10 Minutes Continuou
DA051_2_	Y/N Do Moderate Physical Effort At Least 10 Minutes Cont
DA051_3_	Y/N Walking At Least 10 Minutes Continuously
DA052_1_	Days Do Vigorous Activities At Least 10 Minutes Continuo
DA052_2_	Days Do Moderate Physical Effort At Least 10 Minutes Con
DA052_3_	Days Walking At Least 10 Minutes Continuously
Wave 2:	
DA051_1_	do at least 10 minutes continuously
DA051_2_	do at least 10 minutes continuously
DA051_3_	do at least 10 minutes continuously
DA052_1_	days
DA052_2_	days
DA052_3_	days

How Constructed:

RwDRINK indicates whether respondent has drunk alcoholic beverages in the past. A code of 0 indicates that the respondent reports never had an alcoholic drink in the past. A code of 1 indicates that the respondent reports having had an alcoholic drink during the past.

RwDRINKL indicates whether the respondent has had an alcoholic drink during the last 12 months. A code of 0 indicates that the respondent reports not having any alcoholic drink during the last 12 months. A code of 1 indicates that the respondent reports having had an alcoholic drink during the last 12 months.

Don't know, or refused values of RwDRINK and RwDRINKL are assigned special missing values .d, .r, respectively. RwDRINK and RwDRINKL are set to plain missing (.) for respondents who did not respond to this wave.

The frequency of drinking questions in the CHARLS are surveyed by asking the respondent about their use of three different types of alcohol separately. Those three types of alcohol are liquor, beer, wine or rice wine. For each type of alcohol the respondent is asked how often they drank the particular alcohol during the past year. Drinking frequency is surveyed by the categories: "once a month", "2-3 times a month", "once a week", "2-3 times a week", "4-6 times a week", "once a day", "twice a day", and "more than twice a day."

RwDRINKX is the highest frequency of drinking behavior during the last year that the respondent reports for any one of the three types of alcohol. RwDRINKX is defined as "0.none or less than once a month", "1.one to several times a month" as from "once a month" or "2-3 times a month", "2.one to several times a week" as from "once a week" or "1-2 times a week", "3.Most days of the week" as from "4-6 times a week", and "4.Every day of the week" as from "once a day" or "twice a day", or "more than twice a day". Don't know, or refused values of RwDRINKX is assigned special missing values .d, .r, respectively. RwDRINKX is set to plain missing (.) for respondents who did not respond to this wave.

SwDRINK, SwDRINKL and SwDRINKX indicates whether the respondent's spouse has drank alcoholic beverages in the past and are taken directly from the spouse's values to RwDRINK, RwDRINKL and RwDRINKX. In addition to the special missing codes used in RwDRINK, RwDRINKL and RwDRINKX, SwDRINK, SwDRINKL and SwDRINKX employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

Unlike the HRS, the CHARLS asks the respondent's drinking behavior in longer time period (1 year).

Unlike the HRS, the CHARLS asks about the frequency of drinks consumed, not the number of days of drinking. The frequency of drinks consumed questions were asked about three different types of alcohol separately.

Also the CHARLS has different list of alcoholic drink for respondent to select due to the fact that some types of alcoholic drinks are common in China but not in the other country. For example, white liquor and liang of liquor.

CHARLS Variables Used:

Wave 1:

DA067	Did You Drink Any Alcoholic Beverages Last Year
DA068S1	Did You Drink Liquor
DA068S2	Did You Drink Beer
DA068S3	Did You Drink Wine
DA069	Did You Drink Alcoholic Beverages Ever

How Constructed:

RwSMOKEV indicates whether the respondent reports ever smoked. Smoking including chewed tobacco, smoked a pipe, self-rolled cigarettes, cigarettes and cigars. A code of 0 indicates that the respondent reports never having smoked. A code of 1 indicates that the respondent reports ever smoked.

RwSMOKEN indicates the respondent's current smoking habit. This question is only asked if the respondent reports ever smoked. If the respondent reported never smoking RwSMOKEN is assigned a value of 0. A code of 0 indicates that the respondent reports quit smoking. A code of 1 indicates that the respondent reports still smoking nowadays.

Don't know, missing, or refused values of RwSMOKEV and RwSMOKEN are assigned special missing codes .d, .m, .r, respectively. RwSMOKEV and RwSMOKEN are set to plain missing (.) for respondents who did not respond to this wave.

SwSMOKEV and SwSMOKEN indicate whether the respondent's spouse reports their ever or current smoking habit and is taken directly from the spouse's responses to RwSMOKEV and RwSMOKEN. In addition to the special missing codes used in RwSMOKEV and RwSMOKEN, SwSMOKEV and SwSMOKEN employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

Starting in Wave 2, re-interview respondents who previously reported never smoking were re-asked whether they have ever smoked and if they answered yes, they are asked if they still have the habit. Re-interview respondents who previously reported having had smoked were asked only if they still have the habit.

In Wave 2 there are a large number of respondents who previously reported they smoked who were not then asked if they still have the habit. As if it not possible to determine whether the respondent is currently smoking, these cases are coded as .m missing.

CHARLS Variables Used:

Wave 1:	
DA059	Smoke or Not
DA061	Still Smoking or Not
Wave 2:

1.yes		1386	1946

How Constructed:

RwHOSP1Y indicates whether the respondent reports any overnight hospital stay and received inpatient care in the past year. Respondents who report not receiving any inpatient care are coded as 0. Respondents who have received inpatient care in the past year are coded as 1. Rwhsptim1y indicates the number of times that the respondent has received inpatient care in the past year. Don't know, refused, or other missing responses of RwHOSP1Y and Rwhsptim1y are assigned to special missing codes .d, .r, .m respectively. RwHOSP1Y and Rwhsptim1y are set to special missing (.p) for respondents who did not respond to the question due to proxy interview. RwHOSP1Y and Rwhsptim1y are set to plain missing (.) for respondents who did not respond to the current wave.

Rwhspn1te indicates the number of nights that the respondent was hospitalized during the most recent hospital stay (last episode) in the past year. Don't know, refused, or other missing responses of Rwhspn1te are assigned to special missing codes .d, .r, .m respectively. Rwhspn1te is set to special missing (.p) for respondents who did not respond to the question due to proxy interview. Rwhspn1te is set to plain missing (.) for respondents who did not respond to the current wave.

SwHOSP1Y, SwHsptim1y, and SwHspn1te are the current wave respondent's spouse's information related to the hospital stay in the past year. SwHOSP1Y, SwHsptim1y, and SwHspn1te employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No difference known.

Differences with the RAND HRS

Unlike the HRS that ask the respondents about their hospital utilization in the previous two year, the CHARLS asks the respondents about their last year hospital utilization.

The CHARLS only asks the numbers of nights stay for the most recent hospitalization (last episode) in the last year; not the total numbers of nights stay in the last year.

CHARLS Variables Used:

Wave 1:

EE003	Have You Received Inpatient Care LY

How Constructed:

RwDOCTOR1M indicates whether the respondent reports any doctor visit at a facilities or visits by a health worker or a doctor at home in the last month. A code 0 indicates the respondent did not have a doctor visit at a facilities nor was visited by a health worker or a doctor at home in the last month. A code 1 indicates the respondent had a

doctor visit at a facilities or was visited by a health worker or a doctor at home in the last month.

RwDOCTIM1M indicates the number of visits to any of the above facility that the respondents had during last month.

These are the list of the facilities that were asked to the respondents:

1. General hospital
2. Specialized hospital
3. Chinese medicine hospital
4. Community healthcare center
5. Township Hospital
6. Health care post
7. Village clinic/private clinic
8. Other

Don't know, refused, or other missing responses of RwDOCTOR1M and RwDOCTIM1M are assigned to special missing codes .d, .r, .m respectively. RwDOCTOR1M and RwDOCTIM1M are set to special missing (.p) for respondents who did not respond to the question due to proxy interview. RwDOCTOR1M and RwDOCTIM1M are set to plain missing (.) for respondents who did not respond to the current wave.

SwDOCTOR1M and SwDOCTIM1M are the current wave respondent's spouse's information about the doctor visit in the last month. SwDOCTOR1M and SwDOCTIM1M employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No difference known.

Differences with the RAND HRS

Unlike the HRS that ask the respondents about their detail of doctor visit in previous two year, the CHARLS only asks the respondents about their last month doctor visit.

Value-----	S2DENTST1Y
.m:missing	101
.u:unmar	2426
.v:sp nr	1360
0.no	12212
1.yes	2506

How Constructed:

RwDENTST1Y indicates whether the respondent has seen a dentist for dental care including dentures in the past year. A code 0 indicates the respondent did not receive dental care in the past year. A code 1 indicates the respondent had seen a dentist for dental care, including dentures. RwDENTIM1Y indicates the number of dental visits in the past year. Don't know, refused, or other missing responses of RwDENTST1Y and RwDENTIM1Y are assigned to special missing codes .d, .r, .m respectively. RwDENTST1Y and RwDENTIM1Y are set to special missing (.p) for respondents who did not respond to the question due to proxy interview. RwDENTST1Y and RwDENTIM1Y are set to plain missing (.) for respondents who did not respond to the current wave.

SwDENTST1Y and SwDENTIM1Y provide the information for the respondent's spouse or partner. SwDENTST1Y and SwDENTIM1Y employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

Questions related to dental care and a dentist visit only are asked starting in wave 2 questionnaire.

Differences with the RAND HRS

Unlike the HRS that ask the respondents about their detail of dental visit in previous two year, the CHARLS only asks the respondents about their last year dental visit.

CHARLS Variables Used:

EF006	how often did the respondent receive assistance
EH001	have dentist for dental care
EH002	times of dental care

Medical Expenditure: hospitalization in the past year

Wave	Variable	Label	Type
1	R1OOPHOS1Y	r1oophosly:w1 r hospitalization out-of-pocket expenditure la	Cont

S2TOTHOS1Y	14518	1508.74	9556.65	0.00	500000.00

How Constructed:

RWOOPHOS1Y is the value of out-of-pocket hospitalization expenditure for the respondent in the past year. RWOOPHOS1Y includes the fees paid to the hospital but excludes the wages paid to a hired nurses, transportation costs, and accommodation costs for respondent and family members. RWTOTHOS1Y is the value of total hospitalization expenditure for the respondent in the past year, including the amount that insurance company paid. This variable has the same component as RWOOPHOS1Y that is including the fees paid to the hospital but excludes the wages paid to a hired nurses, transportation costs, and accommodation costs for respondent and family members.

Don't know, refused, or other missing responses of RWOOPHOS1Y and RWTOTHOS1Y are assigned to special missing codes .d, .r, .m respectively. RWOOPHOS1Y and RWTOTHOS1Y are set to special missing (.p) for respondents who did not respond to the question due to proxy interview. RWTOTHOS1Y is set to plain missing (.) for respondents who did not respond to the current wave.

SWOOPHOS1Y and SWTOTHOS1Y is the current wave respondent's spouse's information about the hospital expenditure in the past year. SWOOPHOS1Y and SWTOTHOS1Y employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No difference known.

Differences with the RAND HRS

Unlike the HRS that ask the respondents about their hospitalization expenditure in last two year, the CHARLS only asks the respondents about their last year hospitalization expenditure. Moreover, the RAND HRS only provides a summary of out-of-pocket expenditure and a summary total medical expenditures, component values for hospitalization and doctor visits are not included.

CHARLS Variables Used:

Wave 1:

EE003	Have You Received Inpatient Care LY
EE004	How Many Times Have You Received Inpatient Care LY

How Constructed:

RwOOPDOC1M is the value of out-of-pocket doctor visit expenditures for the respondent in the last month. RwOOPDOC1M includes the fees paid for treatment, medication costs and prescription drugs. RwtOTDOC1M is the value of total expenditures of the doctor visit for the respondent in the past year, including the amount that insurance company paid. This variable has the same component as RwOOPDOC1M that is including the fees paid for treatment, medication costs and prescription drugs.

Don't know, refused, or other missing responses of RwOOPDOC1M and RwtOTDOC1M are assigned to special missing codes .d, .r, .m respectively. RwOOPDOC1M and RwtOTDOC1M are set to special missing (.p) for respondents who did not respond to the question due to proxy interview. RwOOPDOC1M and RwtOTDOC1M are set to plain missing (.) for respondents who did not respond to the current wave.

SwOOPDOC1M and SwTOTDOC1M is the current wave respondent's spouse's information about the doctor visit expenditure in the last month. SwOOPDOC1M and SwTOTDOC1M employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No difference known.

Differences with the RAND HRS

Unlike the HRS that ask the respondents about their doctor visit expenditure in last two year, the CHARLS only asks the respondents about their last month doctor visit expenditure. Moreover, the RAND HRS only provides a summary of out-of-pocket expenditure and a summary total medical expenditures, component values for hospitalization and doctor visits are not included.

.v:sp nr	538	1360
0.no	1057	616
1.public insurance plan	13725	14056

How Constructed:

RWHIGOV indicates whether the respondent is covered by any public health insurance program. Here is the list of the health insurance plan:

1. Urban employee medical insurance(yi-bao)
2. Urban resident medical insurance
3. New cooperative medical insurance(he-zuo-yi-liao)
4. Urban and rural resident medical insurance
5. Government medical insurance(gong-fei)
6. Medical aid
7. Urban non-employed persons's health insurance (Asked only starting in Wave 2)

A code of 0 indicates that the respondent does not covered by any public health insurance plan. A code of 1 indicates that the respondent is covered by at least one type of public health insurance plan. Don't know, refused, or other missing responses of RWHIGOV are assigned special missing codes .d, .r, .m respectively. RWHIGOV is set to plain missing (.) for respondents who did not respond to the current wave.

SwHIGOV indicates whether the respondent's current wave's spouse's s is covered by any public health insurance program. In addition to the special missing codes used in RWHIGOV, SwHIGOV employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

In Wave 1 CHARLS used the following list to survey insurance types:

- 1) urban employee medical insurance(yi-bao)
- 2) urban resident medical insurance
- 3) new cooperative medical insurance(he-zuo-yi-liao)
- 4) urban and rural resident medical insurance
- 5) government medical insurance(gong-fei)
- 6) medical aid
- 7) private medical insurance: purchased by respondent's union
- 8) private medical insurance: purchased by individual
- 9) other medical insurance
- 10) no insurance

Starting in Wave 2 CHARLS used the following list to survey insurance types:

- 1) urban employee medical insurance(yi-bao)
- 2) urban resident medical insurance
- 3) new cooperative medical insurance(he-zuo-yi-liao)
- 4) urban and rural resident medical insurance
- 5) government medical insurance(gong-fei)
- 6) medical aid
- 7) private medical insurance: purchased by respondent's union
- 8) private medical insurance: purchased by individual
- 9) urban non-employed persons's health insurance
- 10) other medical insurance
- 11) no insurance

Differences with the RAND HRS

The types of insurance programs which are used to determine RWHIGOV in the CHARLS are different from the insurance programs used to determine RWHIGOV in the RAND HRS.

How Constructed:

RwHIPRIV indicates whether the respondent is covered by any private health insurance program. Here is the list of the health insurance plan:

1. Private medical insurance: purchased by respondent's union
2. Private medical insurance: purchased by individual

A code of 0 indicates that the respondent is not covered by any private health insurance plan. A code of 1 indicates that the respondent is covered by at least one type of private health insurance plan. Don't know, refused, or other missing responses of RwHIPRIV are assigned special missing codes .d, .r, .m respectively. RwHIPRIV is set to plain missing (.) for respondents who did not respond to the current wave.

SwHIPRIV indicates whether the respondent's current wave's spouse's s is covered by any private health insurance program. In addition to the special missing codes used in RwHIPRIV, SwHIPRIV employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

In Wave 1 CHARLS used the following list to survey insurance types:

- 11) urban employee medical insurance(yi-bao)
- 12) urban resident medical insurance
- 13) new cooperative medical insurance(he-zuo-yi-liao)
- 14) urban and rural resident medical insurance
- 15) government medical insurance(gong-fei)
- 16) medical aid
- 17) private medical insurance: purchased by respondent's union
- 18) private medical insurance: purchased by individual
- 19) other medical insurance
- 20) no insurance

Starting in Wave 2 CHARLS used the following list to survey insurance types:

- 12) urban employee medical insurance(yi-bao)
- 13) urban resident medical insurance
- 14) new cooperative medical insurance(he-zuo-yi-liao)
- 15) urban and rural resident medical insurance
- 16) government medical insurance(gong-fei)
- 17) medical aid
- 18) private medical insurance: purchased by respondent's union
- 19) private medical insurance: purchased by individual
- 20) urban non-employed persons's health insurance
- 21) other medical insurance
- 22) no insurance

Differences with the RAND HRS

This variable is not available in the RAND HRS.

RwHIOTHP indicates whether the respondent is covered by any other health insurance program. A code of 0 indicates that the respondent is not covered by any other health insurance plan. A code of 1 indicates that the respondent is covered by other health insurance plan. Don't know, refused, or other missing responses of RwHIOTHP are assigned special missing codes .d, .r, .m respectively. RwHIOTHP is set to plain missing (.) for respondents who did not respond to the current wave.

SwhIOTHP indicates whether the respondent's current wave's spouse's s is covered by any other health insurance program. In addition to the special missing codes used in RwHIOTHP, SwhIOTHP employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

In Wave 1 CHARLS used the following list to survey insurance types:

21) urban employee medical insurance(yi-bao)

- 22) urban resident medical insurance
- 23) new cooperative medical insurance(he-zuo-yi-liao)
- 24) urban and rural resident medical insurance
- 25) government medical insurance(gong-fei)
- 26) medical aid
- 27) private medical insurance: purchased by respondent's union
- 28) private medical insurance: purchased by individual
- 29) other medical insurance
- 30) no insurance

Starting in Wave 2 CHARLS used the following list to survey insurance types:

- 23) urban employee medical insurance(yi-bao)
- 24) urban resident medical insurance
- 25) new cooperative medical insurance(he-zuo-yi-liao)
- 26) urban and rural resident medical insurance
- 27) government medical insurance(gong-fei)
- 28) medical aid
- 29) private medical insurance: purchased by respondent's union
- 30) private medical insurance: purchased by individual
- 31) urban non-employed persons's health insurance
- 32) other medical insurance
- 33) no insurance

Differences with the RAND HRS

This variable contains different component than RAND HRS. In the RAND HRS, RWHIOTHP indicates whether the respondent is covered by any health insurance other than government, employer-provided, or long-term care insurance. RWHIOTHP in CHARLS indicates the insurance that is not in the option list; that is, the insurance plan other than urban employee medical insurance(yi-bao), urban resident medical insurance, new cooperative medical insurance(he-zuo-yi-liao), urban and rural resident medical insurance, government medical insurance(gong-fei), medical aid, private medical insurance: purchased by respondent's union and private medical insurance: purchased by individual.

2.very good	710	757
3.good	1887	1362
4.fair	6174	6877
5.poor	4704	4296

How Constructed:

RwSLFMEM provides the respondent's self-report of memory using a scale ranging from 1 for excellent to 5 for poor. Don't know, refused, or other missing responses of RwSLFMEM are assigned special missing codes .d, .r, .m respectively. RwSLFMEM is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. RwSLFMEM is set to plain missing (.) for respondents who did not respond to this wave.

SwSLFMEM is the current wave's spouse's self-reported memory score and it taken directly from the spouse's value to RwSLFMEM. In addition to the special missing codes used in RwSLFMEM, SwSLFMEM employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the

current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

No differences known.

CHARLS Variables Used:

Wave 1:

Immediate Word Recall

Wave	Variable	Label	Type
1	R1IMRC	r1imrc:w1 r immediate word recall	Cont
2	R2IMRC	r2imrc:w2 r immediate word recall	Cont
1	S1IMRC	s1imrc:w1 s immediate word recall	Cont
2	S2IMRC	s2imrc:w2 s immediate word recall	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
R1IMRC	14202	4.08	1.70	0.00	10.00
R2IMRC	16052	4.09	1.74	0.00	10.00
S1IMRC	12120	4.13	1.68	0.00	10.00
S2IMRC	13059	4.16	1.72	0.00	10.00

How Constructed:

The CHARLS included a recall list of 10 different words which were read to a respondent and then the respondent was asked to recall them immediately and later in the survey. Respondents were assigned to one of four non-overlapping lists based on random selection.

RwIMRC counts the amount of words the respondent can immediately recall correctly from a 10 word list. Respondents were given up to 2 minutes to recall words. Don't know, refused, or other missing responses of RwIMRC are assigned special missing codes .d, .r, .m respectively. RwIMRC is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. RwIMRC is set to plain missing (.) for respondents who did not respond to this wave.

SwIMRC is the current wave's spouse's immediate word recall score and is taken directly from the spouse's value to RwIMRC. In addition to the special missing codes used in RwIMRC, SwIMRC employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

In the HRS, starting in Wave 3, the word list was randomly assigned which is similar to the CHARLS.

The word lists in the CHARLS are different from the HRS.

S2DLRC	12861	3.27	2.01	0.00	10.00

How Constructed:

RwDLRC counts the amount of words the respondent can recall correctly from a 10 word list after a delay spent answering other survey questions. Respondents were assigned to one of four non-overlapping lists based on random selection. Don't know, refused, or other missing responses of RwDLRC are assigned special missing codes .d, .r, .m respectively. RwDLRC is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. RwDLRC is set to plain missing (.) for respondents who did not respond to this wave.

SwDLRC is the current wave's spouse's delayed word recall score and it taken directly from the spouse's value to RwDLRC. In addition to the special missing codes used in RwDLRC, SwDLRC employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

R2SER7	14771	3.15	1.82	0.00	5.00
S1SER7	12211	3.16	1.86	0.00	5.00
S2SER7	12099	3.21	1.81	0.00	5.00

How Constructed:

RwSER7 provides the numbers of correct subtractions in the serial 7's test. This test asks the individual to subtract 7 from the prior number, beginning with 100 for five trials. Correct subtractions are based on the prior number given, so that even if one subtraction is incorrect subsequent trials are evaluated on the given (perhaps wrong) answer. Valid scores are 0-5. Don't know, refused, or other missings values for RwSER7 is assigned special missing codes .d, .r, .m, respectively. RwSER7 is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. RwSER7 is set to plain missing (.) for respondents who did not respond to this wave.

SwSER7 provides the current wave's spouse numbers of correct subtractions in the serial 7's test and is taken directly from the spouse's value to RwSER7. In addition to the special missing codes used in RwSER7, SwSER7 employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

How Constructed:

RwDY, RwMO, RwYR, and RwdW indicate whether respondent was able to report today's date correctly, including the day of month, month, year, and day of week, respectively. Each of these variables is coded 1 for a correct answer and 0 for an incorrect answer. Don't know, refused, or other missing responses of RwDY, RwMO, RwYR, and RwdW are assigned special missing codes .d, .r, .m respectively. RwDY, RwMO, RwYR, and RwdW are set to special missing (.p) if the cognition question was skipped because the interview was by proxy. RwDY, RwMO, RwYR, and RwdW are set to plain missing (.) for respondents who did not respond to this wave.

SwDY, SwMO, SwYR and SwDW indicate whether the current wave's spouse was able to correctly report the day of month, month, year, and day of week, respectively. They are taken directly from the spouse's values to RwDY, RwMO, RwYR, and RwdW. In addition to the special missing codes used in RwDY, RwMO, RwYR, and RwdW, SwDY, SwMO, SwYR and SwDW employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwORIENT indicates the orientation to date, month, year and day of week. It is the summary measure for these 4 variables, ranging from 0 to 4, the higher the better oriented. RwORIENT is set to plain missing (.) for respondents who did not respond to this wave.

SwORIENT is the current wave's spouse's orientation score and is taken directly from the spouse's value to RwORIENT. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

Please note that CHARLS wave 2 data only indicates when the respondent answers the question correctly but does not indicate when the respondent answers incorrectly thus it is impossible to distinguish between respondents who did not answer the questions and respondents who answered incorrectly. Cases such as these are coded as .m missing.

Differences with the RAND HRS

A cognition orient (summary date naming) variable is not included in the HRS.

.v:sp nr	538	1360
0.no	4637	4308
1.yes	8742	8956

How Constructed:

RwDRAW is the cognition measure indicating whether the respondent is able to draw an assigned picture (picture of two pentagons overlapped). Don't know, refused, or other missing responses of RwDRAW are assigned special missing codes .d, .r, .m respectively. RwDRAW is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. RwDRAW is set to plain missing (.) for respondents who did not respond to this wave.

SwDRAW is whether the current wave's spouse is able to draw an assigned picture correctly and is taken directly from the spouse's value to RwDRAW. In addition to the special missing codes used in RwDRAW, SwDRAW employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

This question is not asked in the HRS.

CHARLS Variables Used:

Wave 1:

DB032	How Often Did the Respondent Receive Assistance
DC025	Drew the Picture or Failed

Wave 2:

DB032	receive assistance
DC025	draw picture

Total Recall Summary Score

S2TR20	12800	7.48	3.44	0.00	20.00

How Constructed:

RwTR20 is the summary score for total word recall. RwTR20 sums the immediate and delayed word recall scores. It is calculated as RwIMRC (range 0-10) + RwDLRC (range 0-10). RwTR20 is only calculated when the respondent has non-missing values for RwIMRC and RwDLRC.

SwTR20 is the current wave's spouse's total word recall score and is taken directly from the spouse's value to RwTR20. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

No differences known.

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

CyyyyCPINDEX is the annual consumer price index for the year yyyy as indicated in the variable name. CyyyyCPINDEX uses 2010 as its base year so the consumer price index for 2010 is 100. This consumer price index can be used as an inflation multiplier when comparing financial values between different survey years.

CyyyyCPINDEX values were provided by the OECD as part of the Consumer Price (MEI) dataset. The index measures monthly changes in the general level of prices of goods and services that households acquire for consumption. For more information on the calculation of the consumer price index see <http://stats.oecd.org>

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

Consumer price index values are not included in the RAND HRS.

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of cash and savings are asked in the individual asset section.

RwACHCK is a total value of cash and savings deposits of the respondent; that is, sum of cash and saving deposits. Respondents are asked to report how much cash is held by you and your spouse at home. If the respondent is married, they are then asked to identify how much of that value they own either as a real value or as a percentage. If the cash is jointly owned the respondent is suggested to report they own 50% of the cash. Respondents are also asked if they currently hold any deposits in financial institutions in their name. If the respondent reports ownership, they are then asked to report the current total amount of those deposits.

RwACHCK is derived by adding the value of cash and the value of savings deposits together. If the respondent reported an exact value for cash and an exact value for saving deposits, RwACHCK is based on the sum of these two reported value. If the respondent is married then the value of cash owned by respondent or the value owned by the respondent and spouse of cash times the percentage held by the respondent is used. In the case that the respondent is married and reports a value owned by the respondent and spouse but does not specify the value owned just by the respondent or the percentage owned by the respondent then 50% of the value owned by the respondent and spouse is used. If the respondent reported that they did not have any savings accounts at financial institutions, RwACHCK is based only on the value of cash. Don't know, refused, or other missing responses of RwACHCK are assigned special missing codes .d, .r, .m respectively. RwACHCK is set to plain missing (.) for respondents who did not respond to this wave.

SwACHCK is a total value of cash and savings deposit of the respondent's spouse and is taken directly from the spouse's values to RwACHCK. SwACHCK employs two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HwACHCK is a total value of cash, checking and savings at the couple level; that is, sum of RwACHCK and SwACHCK. In addition to the special missing values of RwACHCK and SwACHCK, special missing value .b is assigned if the respondent's spouse is absent.

Cross Wave Differences in CHARLS

In Wave 1 respondents are asked whether they are holding any deposits in financial institutions and if the respondent answers yes, they are then asked to total amount. Starting in Wave 2, Whether the respondent is holds any deposit accounts is not asked starting in wave 2, instead all respondents are asked the total amount of deposits they are holding in financial institutions.

In the current release of the CHARLS data there is a high number of individuals with completely missing information in the Wave 2 Individual Income file. These missings affect RwACHCK.

Differences with the RAND HRS

Value of cash and saving in CHARLS are measured in China's currency Yuan whereas the equivalent measure in RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

In the RAND HRS, RwACHCK, SwACHCK and HwACHCK include the values of checking, savings and money market accounts. In CHARLS, RwACHCK, SwACHCK and HwACHCK include value of cash in hand and deposits in the financial institutions. There is no mention of money market accounts in CHARLS.

CHARLS Variables Used:

Wave 1:

BE001	marital status
HC001	HOW MUCH CASH ARE YOU HOLDING
HC003_1	AMOUNT

H2ASTCK	14429	1313.01	19877.72	0.00	1100000.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of stocks and mutual funds are asked in individual assets section.

RwASTCK is the total value of stocks and mutual funds of the respondent; that is, sum of stocks and mutual funds that the respondent holds. Respondents are asked whether they have held any stocks in the past year under his/her name excluding the equity or stocks from the respondent's work unit. If the respondent has held any stocks, they are then asked to report the present market value of all the stocks the respondent currently holds. Respondents are also asked whether they hold any funds under their name in the past year. If the respondent has held funds, they are then asked to report the present market value of all the funds the respondent currently holds.

RwASTCK is derived by adding the value of stocks and the value of funds together. If the respondent reported an exact value for stocks and mutual funds, then RwASTCK is based on the sum of these two reported value. If the respondent reported that he/she does not have any mutual funds then RwASTCK is based only on the value of stocks, and vice versa. Don't know, refused, or other missing responses of RwASTCK are assigned special missing codes .d, .r, .m respectively. RwASTCK is set to plain missing (.) for respondents who did not respond to this wave.

SwASTCK is the total value of stocks and mutual funds of the respondent's spouse reported and is taken directly from the spouse's values to RwASTCK. In addition to the special missing codes used in RwASTCK, SwASTCK employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HwASTCK is the total value of stocks and mutual funds at the couple level; that is, sum of RwASTCK and SwASTCK. In addition to the special missing values of RwASTCK and SwASTCK, special missing value .b is assigned if the respondent's spouse is absent.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of individuals with completely missing information in the Wave 2 Individual Income file. These missings affect RwASTCK.

Differences with the RAND HRS

Total value of stocks and mutual funds in the CHARLS are measured in China's currency Yuan whereas the equivalent measure in the RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The wording is somewhat different between the HRS and the CHARLS. The HRS asks respondents the value of stocks, mutual funds if sold off and paid off anything owed on it while the CHARLS asks respondents the present market value of all stocks and mutual funds that they are currently holding.

CHARLS Variables Used:

Wave 1:

HC010	HAVE YOU HELD ANY STOCKS IN THE PAST YEAR
HC013	WHAT IS THE PRESENT MARKET VALUE OF YOUR STOCKS
HC018	WHAT IS THE PRESENT MARKET VALUE OF YOUR FUNDS
PROXY	interview done by proxy

Wave 2:

HC010	stocks
HC013	market value of stocks
HC015	funds
HC018	market value of funds
HD012	receive assistance in answering

H2ABOND	14436	136.60	3449.04	0.00	200000.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of government bonds is asked in the individual asset section.

RwABOND is the value of government bonds of the respondent. Respondents are asked whether they have any government bond (e.g. Treasury bills) in their name. If the respondent indicates that not holding any government bonds, RwABOND is assigned a value of zero. If a respondent indicates having a government bonds; the reported amount of total face value is assigned to RwABOND. Don't know, refused, or other missing responses of RwABOND are assigned special missing codes .d, .r, .m respectively. RwABOND is set to plain missing (.) for respondents who did not respond to this wave.

SwABOND is the value of government bonds of the respondent's spouse reported and is taken directly from the spouse's values to RwABOND. SwABOND employs two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HwABOND is the value of government bonds at couple level; that is, sum of RwABOND and SwABOND. In addition to the special missing values of RwABOND and SwABOND, special missing value .b is assigned if the respondent's spouse is absent.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of individuals with completely missing information in the Wave 2 Individual Income file. These missings affect RwABOND.

Differences with the RAND HRS

Value of government bonds in the CHARLS is measured in China's currency Yuan whereas the equivalent measure in the RAND HRS in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Unlike the HRS, the CHARLS only asks the amount of government bond while the HRS asks respondents about money in corporate, municipal, government, or foreign bonds, or any bond funds.

CHARLS Variables Used:

Wave 1:

HC007	DO YOU HAVE ANY GOVERNMENT BONDS
HC008	WHAT IS THE TOTAL FACE VALUE OF GOVERNMENT BONDS
PROXY	interview done by proxy

Wave 2:

HC007	government bonds
HC008	face value of government bonds
HD012	receive assistance in answering

H2AOTHR	14119	2476.19	17301.45	0.00	500000.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of all other saving are asked in the individual asset section.

RwAOTHR is a total value of all other saving of the respondent; that is, sum of public housing fund, Jizikuan, unpaid salary and other deposits, bonds, stocks or fund that belongs to the respondent but are held in a person's name other than respondent and spouse. Respondents are asked to report the amount of each item are held.

RwAOTHR is derived by adding the value of following items:

1. Value of public housing fund

2. Value of Jizikuan

3. Value of unpaid salary

4. Value of other deposits, bonds, stocks or funds that belong to you but which are held in a person's name other than you or your spouse deposits together.

If a respondent indicates not holding any other saving RWAOTHR is assigned a value of zero. For respondents who report not holding deposits, bonds, stocks, nor funds, the question about value of other deposits, bonds, stock, or funds that belong to you but are held in another person's name is not asked. For respondents who indicate having public housing fund, Jizikuan, unpaid salary or other deposits, bonds, stocks or funds that belong to you but which are held in a person's name other than you or your spouse deposits together; the reported amount of total value of other saving is assigned to RWAOTHR. Don't know, refused, or other missing responses of RWAOTHR are assigned special missing codes .d, .r, .m respectively. RWAOTHR is set to plain missing (.) for respondents who did not respond to this wave.

SWAOTHR is the value of all other saving of the respondent's spouse reported and is taken directly from the spouse's values to RWAOTHR. In addition to the special missing codes used in RWAOTHR, SWAOTHR employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HWAOTHR is the value of all other saving at the couple level; that is, sum of RWAOTHR and SWAOTHR. In addition to the special missing values of RWAOTHR and SWAOTHR, special missing value .b is assigned if the respondent's spouse is absent.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of individuals with completely missing information in the Wave 2 Individual Income file. These missings affect RWAOTHR.

Differences with the RAND HRS

Value of all other savings in the CHARLS are measured in China's currency Yuan whereas the equivalent measure in the RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

In the HRS, respondents report all other savings or assets, such as jewelry, money owned to you by others, a collection for investment purposes, and rights in a trust or estate where you are the beneficiary, or an annuity as one value. HRS respondents are also told to report the net amount which is the value if sold and then paid off any debts on it.

In the CHARLS, RWAOTHR includes the value of public housing fund and Jizikuan which are unique in China. Jizikuan is fund individuals provided to the work unit for the purpose of investment, building apartment and etc.

CHARLS Variables Used:

Wave 1:

HC021	other deposits
HC022	What is the value of such assets? (yuan)
HC027	DO YOU HAVE PUBLIC HOUSING FUND
HC028	WHAT IS THE TOTAL AMOUNT OF MONEY IN PUBLIC HOUSING FUND

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

RwADEBT is a total value of other debt of the respondent; that is, sum of loan and credit card debt. Respondents are asked the amount of loan that haven't repaid (not including loan of house) and the amount of credit card balance. If the respondent indicates not having any loan or credit card debt, RwADEBT is assigned a value of zero. If a respondent indicates having loan or credit card debit; the reported amount of total of debit is assigned to RwADEBT.

RwADEBT is derived by adding the value of following items:

1. Value of other loan (not including loans for house)

2. Value of credit card debt

Don't know, refused, or other missing responses of RWADEBT are assigned special missing codes .d, .r, .m respectively. RWADEBT is set to plain missing (.) for respondents who did not respond to this wave.

SWADEBT is the value of other debts of the respondent's spouse reported and is taken directly from the spouse's values to RWADEBT. In addition to the special missing codes used in RWADEBT, SWADEBT employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HWADEBT is the value of other debts at the couple level; that is, sum of RWADEBT and SWADEBT. In addition to the special missing values of RWADEBT and SWADEBT, special missing value .b is assigned if the respondent's spouse is absent.

Cross Wave Differences in CHARLS

CHARLS asks the respondent an additional question in wave 2 questionnaire "What is the total amount of personal loan that you haven't repaid yet?"

In the HRS, respondents report any debt from credit card balances, medical debts, life insurance policy loans, loans from relatives, and so forth. In the CHARLS, RWADEBT only includes credit card balances and other loans (not including loan for house) without further specification.

Differences with the RAND HRS

Value of other debt in CHARLS are measured in China's currency Yuan whereas the equivalent measure in RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

In the HRS, respondents report any debt from credit card balances, medical debts, life insurance policy loans, loans from relatives, and so forth. In the CHARLS, RWADEBT only includes credit card balances and other loans (not including loan for house) without further specification.

CHARLS Variables Used:

Wave 1:

HD001	total of loans not repaid yet
HD003	CREDIT CARD BALANCE
PROXY	interview done by proxy

Wave 2:

HD001	amount of unpaid loan
HD002_W2_1	amount of personal borrowing
HD003	credit card balance
HD012	receive assistance in answering

Individual total non-housing financial wealth

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Total value of non-housing financial wealth are asked in the individual asset section.

HwATOTF is a total value of non-housing financial wealth of the respondent and spouse; that is, sum of cash and saving deposit, stocks and mutual funds, government bonds and all other saving minus the value of debt. Respondent and spouse are asked to report the amount of each item is held.

HwATOTF is derived by adding the value of following items:

1. Individual value of cash and saving accounts
2. Individual value of stocks and mutual funds
3. Individual value of government bonds
4. Individual value of all other savings

And minus:

1. Individual value of other debt

$HwATOTF = (HwACHCK + HwASTCK + HwABOND + HwAOTHR) - HwADEBT$

Cross Wave Differences in CHARLS

Refer to "Cross Wave Differences in CHARLS" section of each component to identify cross wave differences.

Differences with the RAND HRS

These values in CHARLS are measured in China's currency Yuan whereas the equivalent measure in RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Refer to "Differences with RAND HRS" section of each component to identify differences with the RAND HRS variable of the same name.

3.mixed from wave 1 and 2	888

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Net value of other real estate (not primary residence) is asked in the household asset section.

HH1ARLES is the net value of other real estate at the household level; that is, the present market value of other real estate minus the mortgage of other real estate. Financial respondents are asked to report the value of other residential properties and the mortgage of the other residential properties. In the case that the other residential property is not owned in part by the respondent and spouse, but instead only by other household members, the value of the other residential property is not asked.

The financial respondent reports the present market value of other residential property that is owned by the respondent or spouse; furthermore, there are two ways for the respondent to report the value of other residential property:

1. Total price
2. Price per square meter

We first take the reported total price. If the value is missing, we then take the reported price per square meter times the size of the property to fill in the missing value. If the respondent indicates not having other residential property then it is assigned a value of zero. If a respondent indicates having other residential property, the reported amount of total value is assigned. Don't know, refused, or other missing responses of HHwARLES are assigned special missing codes .d, .r, .m respectively. HHwARLES is set to plain missing (.) for respondents who did not respond to this wave.

If the financial respondent indicates that the household has taken out a bank loan to finance the purchase, construct or decorate the house then the amount of mortgage is reported. For other houses where a loan has been taken out, HHwARLES is derived by taking the difference of the value of other real estate minus the mortgage of the other real estate.

Please note, starting in wave 2, re-interview respondents are not asked how many other residences they own. Instead, they are asked how many new residences they obtained since the last wave. If the respondent reports the household did not obtain any new house in the past 2 years, CHARLS did not ask the respondent about the current value of other residence or the current value of other house mortgage. In this case, HHwARLES is assigned the value from previous wave. If the respondent reported that they obtained new residences the value of the newly obtained residences are added to the value reported from the previous wave.

HHwARLFG indicates whether the value of HHwARLES is taken from wave 1 solely, wave 2 solely, or is based on values reported in both wave 1 and wave 2.

Cross Wave Differences in CHARLS

Starting in the wave 2 questionnaire, if the re-interviewed respondent indicates that the household did not obtain any new house in the past 2 years, then the value of other residences and the value of mortgage of other residences are not asked. Starting in the wave 2 questionnaire, if the re-interviewed respondent indicates that the household did not obtain any new house since the last interview, then the value of other residences and the value of mortgage of other residences are not asked. If the respondent indicates that the household did obtain new houses since the last interview, only the values of those newly obtained other residences are asked.

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Assets section in the Wave 2 Household Income file. These missings affect HHwARLES.

Differences with the RAND HRS

Net value of other residential property in the CHARLS is measured in China's currency Yuan whereas the RAND HRS uses US dollar. Therefore, conversion into a common currency is necessary before comparison of these data.

In the HRS, respondents report the value of main home, second home, and other real estate. However, CHARLS does not distinguish the difference between the value of a second home and other real estate.

In the HRS, the respondent reports the other real estate including rental real estate, land, a partnership, or money owned to you on a land contract or mortgage. However, in the CHARLS, HHwARLES only includes other residential housing units.

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of primary residence are asked in the household asset section.

HHwAHOUA is the value of primary residence without the percentage of the ownership at the household level. Financial respondents are asked to report the amount of the primary residence, regardless if the current residence is owned by any of the household members. Financial respondents report the present market value of the current residence or the value of a similar house within the same neighborhood; furthermore, there are two ways for respondent to report the value of primary residence:

1. Total price
2. Price per square meter

We first take the reported total value. If the total value is not reported, we then take the price per square meter value times the size of the residence. There are some cases where both total and per square meter values are reported. In this instance, we take the larger value if the house is in urban area. If the house is in the rural area, we take the larger value if value is less than 1000 yuan and smaller value if value is greater than 10,000 yuan. If the respondent indicates the current residence does not belong to any household members then HHwAHOUA is assigned a value of zero. There are also a number of cases where only the price per square meter is reported but the size of the residence is not reported. For these cases the residence size is imputed. If the respondent reports the size of the property but not the size of the residence then the size of the residence is imputed by multiplying the size of the property by the mean ratio of residence size to property size for all CHARLS respondents who reported both residence and property size. If the respondent does not report either the size of the property or the size of residence, the size of the residence is imputed using the mean residence size for the community as identified by communityID. Don't know, refused, or other missing responses of HHwAHOUA are assigned special missing codes .d, .r, .m respectively. HHwAHOUA is set to plain missing (.) for respondents who did not respond to this wave.

HHwAFHOUA is a flag variable which indicates whether HHwAHOUA is derived using an imputed residence size. A value of 0 indicates that HHwAHOUA is either not derived using price per square meter or is derived using price per square meter and the reported size of the residence. A value of 1 indicates HHwAHOUA is derived using the price per square meter and an imputed value for residence size based on the reported size of the property. A value of 2 indicates HHwAHOUA is derived using the price per square meter and an imputed value for residence size based on the mean residence size for the community as identified by communityID.

HHwAHRT0 is the total percent of ownership for primary residence for all household members. The primary residence might be owned by more than one person or by other households; in this case, reporting the percentage of the ownership for the primary residence is informative and necessary. If the respondent indicates the current residence does not belong to any household members then HHwAHRT0 is assigned a value of zero. Don't know, refused, or other missing responses of HHwAHRT0 are assigned special missing codes .d, .r, .m respectively. HHwAHRT0 is set to plain missing (.) for respondents who did not respond to this wave.

HHwAHOU is the value of primary residence with the percentage of the ownership at the household level. It is the value of HHwAHOUA multiple HHwAHRT0. If the respondent indicates the current residence does not belong to any household members then HHwAHOU is assigned a value of zero. Don't know, refused, or other missing responses of HHwAHOU are assigned special missing codes .d, .r, .m respectively. HHwAHOU is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Assets section in the Wave 2 Household Income file. These missings affect HHwAHOUSA, HHwAHRT0, and HHwAHOUS.

Differences with the RAND HRS

Value of primary residence in the CHARLS are measured in China's currency Yuan whereas the equivalent measure in the RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The HRS asks respondents about the value of home or farm and the value of mobile home and site separately. These two measures are combined in the HRS as a value of primary residence. Unlike the RAND HRS, the CHARLS doesn't survey the value of mobile home and site.

HH2AMORT	17518	1759.26	23939.37	0.00	1060000.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of all mortgages for primary residence are asked in the household asset section.

HHwAMORT is the value of mortgage (primary residence) at the household level; that is, the financial respondent reports the amount of bank loan that the household took out for financing the purchase, construct or decorate on the house that the household owns.

Value of mortgage is only asked if the financial respondent indicates that the current residence is fully owned by household members. If the respondent indicates that does not have any mortgage, HHwAMORT is assigned a value of zero. If a respondent indicates having mortgage; the reported amount of total value is assigned. If the respondent indicates the current residence does not belong to any household members then HHwAMORT is assigned a value of zero. Don't know, refused, or other missing responses of HHwAMORT are assigned special missing codes .d, .r, .m respectively. HHwAMORT is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Assets section in the Wave 2 Household Income file. These missings affect HHwAMORT.

Differences with the RAND HRS

Value of all mortgages (primary residence) in the CHARLS are measured in China's currency Yuan whereas the equivalent measure in the RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The HRS respondents are asked how much they still owe on a mortgage, land contract, second mortgage or any other loan that uses property as collateral. HRS respondents are also asked to not include the value of any home equity lines of credit. Unlike the HRS, CHARLS only asks respondents the outstanding amount of the loan.

CHARLS Variables Used:

Refer to "Cross Wave Differences in CHARLS" section of each component to identify cross wave differences.

Differences with the RAND HRS

Net value of primary residence in CHARLS is measured in China's currency Yuan whereas the equivalent measure in RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Refer to "Differences with RAND HRS" section of each component to identify differences with the RAND HRS variable of the same name.

Household value of vehicles

Wave	Variable	Label	Type
1	HH1ATRAN	hh1atran:w1 asset: hh value of transportation	Cont
2	HH2ATRAN	hh2atran:w2 asset: hh value of transportation	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
HH1ATRAN	17385	5367.12	34323.16	0.00	2001000.00
HH2ATRAN	17713	9105.57	40003.66	0.00	1003000.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of vehicles are asked in household assets section.

HHwATRAN is the value of vehicles at the household level; that is, sum of the value of automobile, electric bicycle and motorcycle that the household owned. Financial respondents reported the value of each of the following vehicle has retained.

HHwATRAN is derived by adding the value of following items:

1. Automobile
2. Electric bicycle
3. Motorcycle

If the respondent indicates that not having any vehicles, HHwATRAN is assigned a value of zero. If a respondent indicates having a vehicle; the reported amount of retained value is assigned to HHwATRAN. Don't know, refused, or other missing responses of HHwATRAN are assigned special missing codes .d, .r, .m respectively. HHwATRAN is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Assets section in the Wave 2 Household Income file. These missings affect HHwATRAN.

Differences with the RAND HRS

Value of vehicle in CHARLS is measured in China's currency Yuan whereas the equivalent measure in RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

In the CHARLS, this measure not only includes the value of automobile and it also includes value of electric bicycle and motorcycle.

CHARLS Variables Used:

Wave 1:

HA065S2	own assets: electric bicycle
HA065S3	own assets: motorcycle
HA065_1_1_	current value of asset: automobile
HA065_1_2_	current value of asset: electric bicycle
HA065_1_3_	current value of asset: motorcycle

Household value of non-financial asset (consumer durable asset)

Wave	Variable	Label	Type
1	HH1ADURBL	hh1adurbl:w1 assets: hh consumer durable assets	Cont
2	HH2ADURBL	hh2adurbl:w2 assets: hh consumer durable assets	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
HH1ADURBL	17385	3302.07	7708.61	0.00	418000.00
HH2ADURBL	17713	4629.37	11611.78	0.00	583600.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of non-financial assets (consumer durable assets) are asked in the household asset section.

HHwADURBL is the value of non-financial asset at the household level; that is, total value of refrigerator, washing machine, TV, computer, stereo system, camera, air conditioner, mobile phone, furniture, music instrument, valuable decorations, ornaments and vases treasures and precious metal and antique, value painting and calligraphic work and other artistic work. Financial respondents are asked to report the value of following list item has retained.

HHwADURBL is derived by adding the value of following items:

1. Refrigerator
2. Washing machine
3. TV
4. Computer
5. Stereo system
6. Camera

7. Air conditioner
8. Mobile phone
9. Furniture
10. Music instrument
11. Valuable decorations, ornaments, and vases
12. Treasures and precious metal
13. Antiques, valuable paintings and calligraphic work and other artistic work

If the respondent indicates that the household does not own these non-financial assets, HHwADURBL is assigned a value of zero. If a financial respondent indicates that the household owns these non-financial assets, the reported total retained value of these assets is assigned to HHwADURBL. Don't know, refused, or other missing responses of HHwADURBL are assigned special missing codes .d, .r, .m respectively. HHwADURBL is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Assets section in the Wave 2 Household Income file. These missings affect HHwADURBL.

Differences with the RAND HRS

This variable not available in RAND HRS.

Household value of fixed capital assets

Wave	Variable	Label	Type
1	HH1AFIXC	hh1afixc:w1 asset: hh fixed capital assets	Cont
2	HH2AFIXC	hh2afixc:w2 asset: hh fixed capital assets	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
HH1AFIXC	17221	5213.12	63754.20	0.00	4000000.00
HH2AFIXC	17439	7141.09	85334.13	0.00	5000000.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of fixed capital assets are asked in the household asset section.

HHwAFIXC is the value of fixed capital assets at the household level; that is, total value of tractor, thresher, tractor tools, water pump, processing equipment, fixed capital used in household production or self-employment activities, and other durable or fixed assets worth 500 yuan and more. Financial respondents are asked to report the value of each of the following item has retained.

HHwAFIXC is derived by adding the value of following assets:

1. Value of tractor
2. Value of thresher
3. Value of tractor tools
4. Value of water pump
5. Value of processing equipment
6. Current value of fixed capital used in household production or self-employment activities

7. Value of other durable or fixed assets worth 500 yuan and more

If the respondent indicates that not having any fixed capital assets, HHwAFIXC is assigned a value of zero. If a financial respondent indicates that the household owns these fixed capital assets, the reported total value of these assets is assigned to HHwAFIXC. Don't know, refused, or other missing responses of HHwAFIXC are assigned special missing codes .d, .r, .m respectively. HHwAFIXC is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Assets section in the Wave 2 Household Income file. These missings affect HHwAFIXC.

Differences with the RAND HRS

This variable is not available in RAND HRS.

Household value of irrigable land

Wave	Variable	Label	Type
1	HH1ALAND	hh1aland:w1 asset: hh value of irrigable land	Cont
2	HH2ALAND	hh2aland:w2 asset: hh value of irrigable land	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
HH1ALAND	17423	1626.13	24326.84	0.00	3000050.00
HH2ALAND	17697	3013.80	76321.60	0.00	6400000.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of irrigable land are asked in the household asset section.

HHwALAND is the value of the irrigable land at the household level; that is, the rent of cultivated land, forest land, pasture and pond if the land is rent out. Financial respondents are asked to report the value of the annual rent per mu per year would get if rent out. The respondents also reported the amount of mu that the household have. In this case, the value of the irrigable land is the reported possible rent per mu per year times the area of land.

HHwALAND is derived by adding the value of the following items:

1. Rent for cultivated land
2. Rent for forest land
3. Rent for pasture
4. Rent for pond

If the respondent indicates that not having any irrigable land, HHwALAND is assigned a value of zero. Don't know, refused, or other missing responses of HHwALAND are assigned special missing codes .d, .r, .m respectively. HHwALAND is set to .i for

responses which are considered invalid. HHwALAND is set to plain missing (.) for respondents who did not respond to this wave.

In China, government has the ownership of land and people only has the rights to use the land. As a result, we calculate the rent from the land, if land is rented out, not the actual value of the land.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Assets section in the Wave 2 Household Income file. These missings affect HHwALAND.

Differences with the RAND HRS

The HRS does not differentiate irrigable land. All land is included as a part of real estate and asked about its value.

Mu is a Chinese unit of area. The conversion between mu to square feet is 1 to 7175.94.

HH2AAGRI	17566	1668.89	21164.14	0.00	1000000.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of livestock and fisheries are asked in the household asset section.

HHwAAGRI is the current value of all livestock (including chicken, duck, cattle, pig, sheep, etc) and aquatic life at the household level.

If a financial respondent indicates that the household grew livestock or aquatic life in the past year; the value of the livestock or aquatic life is reported and assigned to HHwAAGRI. If the respondent indicates that not having any livestock or fisheries, HHwAAGRI is assigned a value of zero. Don't know, refused, or other missing responses of HHwAAGRI are assigned special missing codes .d, .r, .m respectively. HHwAAGRI is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Agricultural Income and Expenditure section in the Wave 2 Household Income file. These missings affect HHwAAGRI.

Differences with the RAND HRS

This variable is not available in RAND HRS.

HH2APLOAN	17414	-5388.60	33908.28	-500000.00	500000.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of monetary are asked in the household asset section.

HHwALEND is the amount of money that the household lent to other families or individual and had not been paid in the past year. If the respondent indicates not lending out money to other families or individual, HHwALEND is assigned a value of zero.

HHwABORR is the amount of loan that the household still owing to other families, individual or your work unit.

Don't know, refused, or other missing responses of HHwALEND or HHwABORR are assigned special missing codes .d, .r, .m respectively. HHwALEND or HHwABORR are set to .i for responses which are considered invalid. HHwALEND or HHwABORR are set to plain missing (.) for respondents who did not respond to this wave.

HHwAPLOAN is the net value of monetary asset. $HHwAPLOAN = HHwALEND - HHwABORR$.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Assets section in the Wave 2 Household Income file. These missings affect HHwALEND and HHwABORR.

Differences with the RAND HRS

This variable is not included in RAND HRS.

CHARLS Variables Used:

Wave 1:

HH2AFHHM	17175	1296.00	42766.25	-2000000.00	1000000.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

Value of financial asset and debts that other household members have are asked in the household asset section.

CHARLS not only asks respondents and spouses about their financial situation, but also asks each of other household members about his/her financial situation.

HHwAFSST is the value of financial asset that other household members currently hold. The financial respondent reports the value of all financial assets (including cash, saving, stocks and funds) of each household member is holding. For households without any other household members beside the respondent and spouse, HHwAFSST is assigned a value of zero.

HHwAFLOA is the amount of debt that other household members have. The financial respondent reports the value of all outstanding (unpaid) loans from banks or financial institutions (not including mortgage) of each household member is owing. For households without any other household members beside the respondent and spouse, HHwAFLOA is assigned a value of zero.

Don't know, refused, or other missing responses of HHwAFSST or HHwAFLOA are assigned special missing codes .d, .r, .m respectively. HHwAFSST or HHwAFLOA are set to plain missing (.) for respondents who did not respond to this wave.

HHwAFHHM is the net value of financial asset that other household members have. That is:

HHwAFHHM = HHwAFSST - HHwAFLOA.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Assets section in the Wave 2 Household Income file. These missings affect HHwAFSST and HHwAFLOA.

Differences with the RAND HRS

This variable is not available in RAND HRS.

1	HH1ATOTF	hh1atotf:w1 asset: hh net value of non-housing financial wea	Cont
2	HH2ATOTF	hh2atotf:w2 asset: hh net value of non-housing financial wea	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
HH1ATOTF	13676	731.71	94422.38	-1129500.00	4088000.00
HH2ATOTF	10823	10166.44	112936.31	-1948450.00	2781500.00

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

HHwATOTF is the net value of non-housing financial wealth at household level.

HHwATOTF is derived by adding the following item:

1. HwATOTF is the total individual financial assets at the couple level.
2. HHwAFHHM is the net value of financial asset that other household members have.
3. HHwAPLOAN is the net value of monetary asset.

$HHwATOTF = HwATOTF + HHwAFHHM + HHwAPLOAN$

Note: This total does not include the value of any real estate or vehicles.

General Comments:

In CHARLS survey, the assets questions are asked in three separate sections: individual asset section, household asset section, and other household members' asset section.

In the individual assets section, all respondents answer the question for their own financial situation. In particular, the individual asset section asks about: value of cash, saving account, stocks, mutual funds, government bond, debt, and all other savings.

In the household asset section, only financial respondents answer the question on behalf of the full household. In particular, the household asset section asks about: value of primary housing, mortgage for primary house, other real estate, vehicle, non-financial household asset, fixed capital asset, irrigable land, and value of livestock.

In the other household members' asset section the financial respondents reports other household members' financial situations. Financial assets and debt are asked in this section.

How Constructed:

HwATOTB is the sum of all financial assets at the household level.

HwATOTB is derived by adding the following items:

1. Individual value of cash and saving accounts
2. Individual value of stocks and mutual funds
3. Individual value of government bonds
4. Individual value of all other savings
5. Household net value of other house
6. Household value of primary residence
7. Household value of vehicles
8. Household value of non-financial asset
9. Household value of fixed capital asset
10. Household value of irrigable land

11. Household value of agricultural asset (livestock and fisheries)

12. Other household members' financial asset and debts

And minus the following items:

1. Individual value of other debt

2. Household value of mortgage of primary residence

$HHwATOTB = HwACHCK + HwASTCK + HwABOND + HwAOTHR + HHwARLES + HHwAHOUS + HHwATRAN + HHwADURBL + HHwAFIXC + HHwALAND + HHwAAGRI + HHwAFHHM - HwADEBT - HHwAMORT$

General Comments:

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available starting in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

How Constructed:

Respondents are asked to report their past year wages and bonus income in both the income module and the work module. These questions are asked to all respondents.

RwIWAGEI is the respondent's total income from the income module. The variable includes respondent's wages and bonus income in past year. Respondents who indicate that they do not receive any wages or bonus income in the past year are not asked the value of income question and are assigned a value of 0 for RwIWAGEI. Respondents can report wage and bonus income in two ways: annually or monthly. RwIWAGEI is derived first using the reported annual amount. If the annual amount is missing, RwIWAGEI is based on use the monthly amount times 12.

RwIWAGEW is the respondent's total income from the work module. RwIWAGEW includes respondents' wages from agricultural work, non-agricultural job, side job, and all other bonuses. Earnings from side jobs is asked as the average monthly income but CHARLS does not include a question asking how many months the respondent worked in the past year at side jobs. Yearly earnings from side jobs for RwIWAGEW is calculated using the number of months the respondent reported working at their main job in the last year. There are three conditions for the respondent to be assigned a value of zero:

1. A respondent who indicates not working for at least three months during lifetime (work includes agricultural work, earning wage work, self-employed activities and unpaid family business), not engaging in any agricultural work for more than 10 days in the past year, not working at least one hour last week, not receiving salary from the job and not expecting to go back to the job in the future or within 6 months.

2. A respondent who indicates not engaging in any agricultural work for more than 10 days in the past year, not working at least one hour last week, having a job but being temporarily laid-off or on sick leave or other leave or in-job training, not receiving salary from the job, not expecting to go back to the job in the future or within 6 months but have worked for at least three months during lifetime.

3. A respondent who indicates not engaging in any agricultural work for more than 10 days in the past year, not working at least one hour last week, having a job but being temporarily laid-off or on sick leave or other leave or in-job training, not working for at least one hour last week in wage or self-employed work or unpaid family business and not expecting to go back to the job in the future or within 6 months.

Don't know, refused, or other missing responses of RwIWAGEI or RwIWAGEW are assigned special missing codes .d, .r, .m respectively. RwIWAGEI or RwIWAGEW are set to plain missing (.) for respondents who did not respond to this wave.

RwIEARN is the maximum value of respondent's earnings from either RwIWAGEI or RwIWAGEW.

SwIWAGEI, SwIWAGEW and SwIEARN are taken directly from the spouse's value to RwIWAGEI, RwIWAGEW and RwIEARN. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HwIEARN is the household earning income in the past year at the couple level; that is, the sum of RwIEARN and SwIEARN. In addition to the special missing values of RwIEARN and SwIEARN, special missing value .b is assigned if the respondent's spouse is absent.

RwIFRING is the respondent's total amount of fringe benefits that are provided by respondent's company. CHARLS includes the following list of possible fringe benefits which might provide by a respondent's work place:

1. Free lunch
2. Free breakfast
3. Free dinner

4. Meal cash subsidy
5. Transportation cash subsidization
6. Free housing
7. Subsidization of housing
8. Company car
9. Company bus
10. Other subsidies

If a respondent indicates that he/she received any of the fringe benefits in the past year, then the amounts were reported. Respondents who indicated that they have not received any fringe benefit are not asked the value and are assigned a value of zero for RwfFRING. There are three conditions for the respondent to be assigned a value of zero:

1. A respondent who indicates not working for at least three months during lifetime (work includes agricultural work, earning wage work, self-employed activities and unpaid family business), not engaging in any agricultural work for more than 10 days in the past year, not working at least one hour last week, not receiving salary from the job and not expecting to go back to the job in the future or within 6 months.

2. A respondent who indicates not engaging in any agricultural work for more than 10 days in the past year, not working at least one hour last week, having a job but being temporarily laid-off or on sick leave or other leave or in-job training, not receiving salary from the job, not expecting to go back to the job in the future or within 6 months but have worked for at least three months during lifetime.

3. A respondent who indicates not engaging in any agricultural work for more than 10 days in the past year, not working at least one hour last week, having a job but being temporarily laid-off or on sick leave or other leave or in-job training, not working for at least one hour last week in wage or self-employed work or unpaid family business and not expecting to go back to the job in the future or within 6 months.

RwISEMP is the respondent's net income earned from self-employed activity in the last year. It is the earned income minus the cost of: energy, housing or equipment rental, raw materials, transportation, marketing, wages, taxes, and other fees. If the respondent is a single operator and self-employed, then the amount is reported. Respondents who indicate that they do not engage in self-employment are assigned a value of zero. Respondents who report that they do engage in self-employment but that other household members are engaged in the same self-employed activity are not asked self-employed earnings here but instead report these earnings in the household income module. For these cases, RwISEMP is assigned a value of zero and household self-employed income is captured in HHwISEMP. There are four conditions for the respondent to be considered not engaged in self-employment:

1. A respondent who indicates not working for at least three months during lifetime (work includes agricultural work, earning wage work, self-employed activities and unpaid family business), not engaging in any agricultural work for more than 10 days in the past year, not working at least one hour last week, not receiving salary from the job and not expecting to go back to the job in the future or within 6 months.

2. A respondent who indicates not engaging in any agricultural work for more than 10 days in the past year, not working at least one hour last week, having a job but being temporarily laid-off or on sick leave or other leave or in-job training, not receiving salary from the job, not expecting to go back to the job in the future or within 6 months but have worked for at least three months during lifetime.

3. A respondent who indicates not engaging in any agricultural work for more than 10 days in the past year, not working at least one hour last week, having a job but being temporarily laid-off or on sick leave or other leave or in-job training, not working for at least one hour last week in wage or self-employed work or unpaid family.

4. A respondent who indicates not working for at least three months during lifetime (work includes agricultural work, earning wage work, self-employed activities and unpaid family business), not engaging in any agricultural work for more than 10 days in the past year, not working at least one hour last week, not receiving salary from the job and not expecting to go back to the job in the future or within 6 months but having a non-agricultural job that is not self-employed or unpaid family business.

Don't know, refused, or other missing responses of RwiFRING and RwiSEMP are assigned special missing codes .d, .r, .m respectively. RwiFRING and RwiSEMP are set to plain missing (.) for respondents who did not respond to this wave.

SwiFRING and SwiSEMP are taken directly from the spouse's measures in RwiFRING and RwiSEMP. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HwiFRING is the total amount of fringe benefits that are provided by the company at the couple level; that is, the sum of RwiFRING and SwiFRING. In addition to the special missing values of RwiFRING and SwiFRING, special missing value .b is assigned if the respondent's spouse is absent.

HwiSEMP is the net income earned from the self-employed activity in the last year at the couple level; that is, the sum of RwiSEMP and SwiSEMP. In addition to the special missing values of RwiSEMP and SwiSEMP, special missing value .b is assigned if the respondent's spouse is absent.

HHwiWAGEO is the value of other household member's wage and bonus income in the past year. This variable is based on questions asked to the household financial respondent about the amounts of wages and bonus income that each of the household member received in the past year. The financial respondent can report wages and bonus income in two ways: annually or monthly. HHwiWAGEO is derived first using the reported annual amount. If the annual amount is missing, HHwiWAGEO is based on the monthly amount times 12. Don't know, refused, or other missing responses of HHwiWAGEO are assigned special missing codes .d, .r, .m respectively. HHwiWAGEO is set to plain missing (.) for respondents who did not respond to this wave.

HHwiAGRI is the net income from agricultural activities at the household level. Respondents who indicate not engaging in agricultural work in the last year are assigned a value of zero. HHwiAGRI is a summary variable which consists of 7 different components:

1. Value of all crop and forestry product produced last year
2. Value of livestock and aquatic life that were sold and consumed in the last year
3. Value of all livestock products produced (including the self-consumption value) in the past year, including milk, wool (including cashmere sheep or goat skin) and eggs
4. Cost of producing crop and forestry products including Seeds (including home-used seeds), fertilizer, organic fertilizer, pesticide, plastic sheets, hiring labor (including with machine or animals), land rents, rents (excluding land rents), irrigation, fuel, transportation, processing, marketing (including packaging, management fee))
5. Cost of purchasing the livestock and aquatic life

6. Cost of producing livestock and aquatic life in the past year (including feed, medicine, pasture fees, animal pens, wages, etc.)

7. The difference of current value of all livestock and last year value of all livestock. Livestock here includes chickens, ducks, cattle, pigs, sheep, etc.

Don't know, refused, or other missing responses of HHWIAGRI are assigned special missing codes .d, .r, .m respectively. HHWIAGRI is set to plain missing (.) for respondents who did not respond to this wave.

HHWISEMP is the value of household income from self-employed activities. Respondents who indicate that the household does not engage in self-employment are assigned a value of zero. The financial respondent reports whether any household members (including respondent and spouse) engaged in the following self-employed activities:

1. Service, such as cooking, sewing, private clinic etc.
2. Transportation
3. Construction
4. Mining
5. Processing production
6. Business and others
7. Others

If the household members conduct any of these activities, the financial respondent reports the net income earned by the household members excluding the fixed capital costs. Don't know, refused, or other missing responses of HHWISEMP are assigned special missing codes .d, .r, .m respectively. HHWISEMP is set to plain missing (.) for respondents who did not respond to this wave.

HHWIEARN is the summary of the total household earnings that includes individual earning income at the couple level, fringe benefits that are provided by the company at the couple level, net income earned from the self-employed activity in the last year at the couple level, other household members' earning income, household level agricultural income, and household level self-employed activities income.

$HHWIEARN = HwIEARN + HwIFRING + HWISEMP + HHWIWAGEO + HHWIAGRI + HHISEMP$

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of individuals with completely missing information in the Wave 2 Individual Income file. These missings affect R2IWAGEI.

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Agriculture Income and Expenditure Module in the Wave 2 Household Income file. These missings affect HHWIAGRI and HHISEMP.

Differences with the RAND HRS

Earnings income in CHARLS are measured in China's currency Yuan whereas the equivalent measure in RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Unlike the RAND HRS, Rwiearn in CHARLS only includes wages and bonus income and taking the maximum value of the wage income from either income module or work module. In RAND HRS, Rwiearn also includes 2nd job, overtime pay/commissions/tips, and professional practice or trade income.

Unlike the RAND HRS, total earnings in the Harmonized CHARLS includes the estimation of fringe benefits which are not asked in the HRS.

Rwifring, Swifring, Rwiseemp, Swiseemp, Hwifring, Hwiseemp, HHwiwageo, HHwiagri and HHwiseemp are not included in RAND HRS.

CHARLS Variables Used:

Wave 1:

FC001	Did you work for other famers in wage for at least ten d

General Comments:

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available starting in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

How Constructed:

Respondents are asked to report their past year pension income in both income module and work module. These questions are asked to all respondents.

RwIPENI is the respondent's total pension income from income module. A respondent reports whether receiving any pension incomes from the following:

- 1.Wages from government institutions and firms
- 2.Supplemental pension of the firms and income from such programs as rural pension insurance
- 3.Urban residents' pension and commercial pension insurance
- 4.Pension subsidy for the old People

Respondents who indicate not receiving any pension income in the past year are assigned a value of 0 for RwIPENI. Respondents can report pension income in two ways: annually or monthly. We first take the reported annual amount. RwIPENI is derived first using the reported annual amount. If the annual amount is missing, RwIPENI is based on the monthly amount times 12.

RwIPENW is the respondent's total pension income from work module. In Wave 1, respondents are asked about pensions in two different sections of the Work, Retirement and Pension module. In the retirement section respondents who reported they are retired are asked whether their retirement was 1) normal retirement 2) early retirement 3) internal retirement first but then regular retirement 4) internal retirement, but not yet regular retirement. If the respondent reported their retirement was one type 1, 2, they are then asked the month and year they started to receive their pension benefits. If the respondent reported their retirement was one type 3, they are then asked the month and year they processed formal retirement. Respondents of retirement types 1, 2, and 3 are then asked whether they receive pension incomes from the following sources:

- 1.Government
- 2.Work Unit
- 3.Social insurance agency
- 4.Commercial insurance company
- 5.Other

The respondents is then asked the monthly pension amount, without specificity to which pensions the respondents selected from the 5 pension sources.

In the pension insurance section respondents who reported they are receiving at least one kind of pension are asked what type of pension they are receiving from the following sources:

- 1.Supplemental pension insurance of the firm

- 2.Commercial pension
- 3.Rural pension
- 4.Resident's pension
- 5.Urban resident's pension
- 6.Pension subsidy to the oldest old
- 7.Other

The respondent is then asked the month and year they started to receive each pension they reported receiving and the monthly benefit amount.

Starting in Wave 2 questions about pension income are only asked in the pension section of the Work, Retirement, and Pension module. Respondents are asked to report whether they receive pension incomes from the following sources:

- 1.Government
- 2.Institution
- 3.Firm
- 4.Supplemental pension insurance of the firm
- 5.Commercial pension insurance
- 6.Rural pension
- 7.Residents' pension
- 8.Urban residents' pension
- 9.New rural social pension insurance
- 10.Land expropriation pension insurance
- 11.Old age pension allowance
- 12.Other

The respondent is then asked the month and year they started to receive each pension they reported receiving and the monthly benefit amount.

In Wave 1, RwiPENW is derived by summing the annual pension amounts both from the retirement section and from the pension section. The annual pension amounts are derived by multiplying the monthly amount by the number of months the respondent received the pension in the last year as reported either from the question about when started to receive the pension or when processed formal retirement. Respondents who indicate not being retired or not receiving any pensions in the last year are assigned a value of 0.

Starting in Wave 2, RwiPENW is derived by summing the annual pension amounts from all 12 pension sources. The annual pension amounts are derived by multiplying the monthly amount by the number of months the respondent received the pension in the last year as reported from the question about when started to receive the pension. There are number of Wave 2 respondents with missing information for the month and year started to receive rural social pension insurance, for these respondents they are assumed to have received the reported monthly pension benefit amount for 12 months in the last year. The current Wave 2 CHARLS release does not include the month and year started to receive an other pension so 12 months in the last year is assumed for respondent who

reported an average monthly pension benefit amount for an other pension. Respondents who indicate not receiving any of the pension types in the last year are assigned a value of 0.

Don't know, refused, or other missing responses of RwIPENI or RwIPENW are assigned special missing codes .d, .r, .m respectively. RwIPENI or RwIPENW are set to plain missing (.) for respondents who did not respond to this wave.

RwIPEN is the maximum value of respondent's earnings from either RwIPENI or RwIPENW.

SwIPENI, SwIPENW and SwIPEN are taken directly from the spouse's value to RwIPENI, RwIPENW and RwIPEN. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HwIPEN is the household pension income in the past year at the couple level; that is, the sum of RwIPEN and SwIPEN. In addition to the special missing values of RwIPEN and SwIPEN, special missing value .b is assigned if the respondent's spouse is absent.

HHwIPENO is the total value of other household member's pension income from income module. The financial respondent reports whether each of the household member received any pension incomes from the following:

- 1.Wages from government institutions and firms
- 2.Supplemental pension of the firms and income from such programs as rural pension insurance
- 3.Urban residents' pension and commercial pension insurance
- 4.Pension subsidy for the old people

If the financial respondent indicates that the household member received pension income in the past year, then the amount was reported. If the financial respondent indicated that the household member did not receive any pension income in the past year the value of pension is not asked and HHwIPENO is assigned a value of 0. Financial respondents can report the amount of pension income in two ways: annually or monthly. HHwIPENO is derived first using the reported annual amount. If the annual amount is missing, HHwIPENO is based on the monthly amount times 12. Don't know, refused, or other missing responses of HHwIPENO are assigned special missing codes .d, .r, .m respectively. HHwIPENO is set to plain missing (.) for respondents who did not respond to this wave.

HHwIPEN is the summary of total household pension income. This variable includes individual pension income and other household members' pension income.

HHwIPEN = HwIPEN + HHwIPENO

Cross Wave Differences in CHARLS

In Wave 1, RwIPENW is derived by summing the annual pension amounts both from the retirement section and from the pension section. The annual pension amounts are derived by multiplying the monthly amount by the number of months the respondent received the pension in the last year as reported either from the question about when started to receive the pension or when processed formal retirement.

Starting in Wave 2, RwIPENW is derived by summing the annual pension amounts from all 12 pension sources. The annual pension amounts are derived by multiplying the monthly amount by the number of months the respondent received the pension in the last year as reported from the question about when started to receive the pension. There are number of Wave 2 respondents with missing information for the month and year started to receive rural social pension insurance, for these respondents they are assumed to have

received the reported monthly pension benefit amount for 12 months in the last year. The current Wave 2 CHARLS release does not include the month and year started to receive another pension so 12 months in the last year is assumed for respondent who reported an average monthly pension benefit amount for another pension.

In the current release of the CHARLS data there is a high number of individuals with completely missing information in the Wave 2 Individual Income file. These missings affect RWPENI.

Differences with the RAND HRS

Pension income in CHARLS are measured in China's currency Yuan whereas the equivalent measure in RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

General Comments:

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available starting in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

How Constructed:

RwIGXFR is the respondent's total government transfer income.

Respondents report whether they receive any government transfer income from the following subsidies:

- 1.Unemployment compensation
- 2.Pension subsidy
- 3.Worker's compensation from industrial accident compensation insurance includes wage-replacement benefits, disability benefit and survivor benefit
- 4.Elderly family planning subsidies
- 5.Medical aid
- 6.Other government subsidies
- 7.Social assistance

Respondents who indicate that they do not receive any government transfer income in the past year are not asked the value of government transfer and are assigned a value of 0 for RwigXFR. Respondents can report government transfer income in two ways: annually or monthly. RwigXFR is derived first using the reported annual amount. If the annual amount is missing, RwigXFR is based on the monthly amount times 12. Don't know, refused, or other missing responses of RwigXFR are assigned special missing codes .d, .r, .m respectively. RwigXFR is set to plain missing (.) for respondents who did not respond to this wave.

SwigXFR is taken directly from the spouse's values to RwigXFR. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HwigXFR is the total household government transfer income at the couple level; that is, the sum of RwigXFR and SwigXFR. In addition to the special missing values of RwigXFR and SwigXFR, special missing value .b is assigned if the respondent's spouse is absent.

HHwigXFRO is the total value of the other household members' government transfer income. The government transfer income questions are asked in the household income section.

The financial respondent reports whether each of the household members received any government transfer incomes from the following subsidies:

- 1.Unemployment compensation
- 2.Pension subsidy
- 3.Worker's compensation from industrial accident compensation insurance includes wage-replacement benefits, disability benefit and survivor benefit
- 4.Elderly family planning subsidies
- 5.Medical aid
- 6.Other government subsidies
- 7.Social assistance

If the financial respondent indicates that the household member has not received any government transfer income in the past year, the value of government transfer is not asked and HHwigXFRO is assigned a value of 0. Respondents can report other household

member's government transfer income in two ways: annually or monthly. HHwIGXFRO is derived first using the reported annual amount. If the annual amount is missing, HHwIGXFRO is based on the monthly amount times 12. Don't know, refused, or other missing responses of HHwIGXFRO are assigned special missing codes .d, .r, .m respectively. HHwIGXFRO is set to plain missing (.) for respondents who did not respond to this wave.

HHwIGXFRH is the total other government transfer income paid to the whole household in the past year. This variable includes not only the respondent and/or spouse's government transfer incomes, but also includes other household members' government transfer income. The household government transfer income and other household members' government transfer income questions are reported by financial respondent in the household income section.

A financial respondent reports total household government transfer income from the following subsidies:

- 1.Dibao
- 2.Subsidy from reforestation
- 3.bgricultural subsidies
- 4.Wubaohu
- 5.Tekunhu
- 6.Work injury subsidies to the immediate family members
- 7.Emergency or disaster relief (jiujikuan, jiuzaikuan)
- 8.Other subsidies

If the financial respondent indicates that the household has not received any household government transfer income in the past year, the household value of government transfer is not asked and HHwIGXFRH is assigned a value of 0. Respondents can report household government transfer income in two ways: annually or monthly. HHwIGXFRH is derived first using the reported annual amount. If the annual amount is missing, HHwIGXFRH is based on the monthly amount times 12. Don't know, refused, or other missing responses of HHwIGXFRH are assigned special missing codes .d, .r, .m respectively. HHwIGXFRH is set to plain missing (.) for respondents who did not respond to this wave.

HHwIGXFRT is the total value of other public transfer income at the household level in the past year. This variable includes not only the respondent and/or spouse's other public transfer incomes, but also includes other household members' other public transfer income. The value of household other public transfer income questions are reported by a financial respondent in the household income section.

The financial respondent reports total household other public transfer income from the following sources:

1. Donation from the society, including cash, and items like food, clothing, etc.
2. Compensation for land seizure
3. Compensation to pulling down the house or apartment

If the financial respondent indicates that the household has not receive any other public transfer income in the past year, the value of other public transfer is not asked and HHwIGXFRT is assigned a value of 0. Respondents can report other public transfer income in two ways: annually or monthly. HHwIGXFRT is derived first using the

reported annual amount. If the annual amount is missing, HHwIGXFRT is based on the monthly amount times 12. Don't know, refused, or other missing responses of HHwIGXFRT are assigned special missing codes .d, .r, .m respectively. HHwIGXFRT is set to plain missing (.) for respondents who did not respond to this wave.

HHwIGXFR is the summary of the total household public transfer that includes individual government transfer income, other household members' government transfer income, household level public transfer and other public transfer at the household level.

HHwIGXFR = HwIGXFR + HHwIGXFRO + HHwIGXFRH + HHwIGXFRT.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of individuals with completely missing information in the Wave 2 Individual Income file. These missings affect RwigXFR.

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Public Transfer Income section in the Wave 2 Household Income file. These missings affect HHwIGXFRH and HHwIGXFRT.

Differences with the RAND HRS

Government transfer income in CHARLS are measured in China's currency Yuan whereas the equivalent measure in RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The information contained in this variable corresponds to the aggregate of the information contained in the RAND-HRS variables related to income from Social Security DI or SSI, income from unemployment or workers compensation and individual income from other government transfers. However, components included in Harmonized CHARLS and RAND HRS are different for this variable, representing different institutional arrangements in each country.

General Comments:

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available starting in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

How Constructed:

RwIOTHR is the respondent's other income. Other income questions are asked in the individual income section specifically about the amount of alimony or child support.

Respondents who indicate that they have not received any other income in the past year are not asked the value of other income question and are assigned a value of 0 for RwIOTHR. Respondents can report other income in two ways: annually or monthly. RwIOTHR is derived first using the reported annual amount. If the annual amount is missing, RwIOTHR is based on the monthly amount times 12. Don't know, refused, or other missing responses of RwIOTHR are assigned special missing codes .d, .r, .m respectively. RwIOTHR is set to plain missing (.) for respondents who did not respond to this wave.

SwIOTHR is taken directly from the spouse's value to RwIOTHR. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special

missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HwIOTHR is the total of other income at the couple level; that is, the sum of RwIOTHR and SwIOTHR. In addition to the special missing values of RwIOTHR and SwIOTHR, special missing value .b is assigned if the respondent's spouse is absent.

HHwIOTHRO is the total value of other household member's other income. This question is asked in household income module. The financial respondent reports whether each of the household member received alimony or child support.

If the financial respondent indicates that the household member has not received any other income in the past year will the value of other income is not asked and HHwIOTHRO is assigned a value of 0. Respondents can report other income in two ways: annually or monthly. We first take the reported annual amount. If the annual amount is missing, we use the monthly amount times 12 to fill the missing. Don't know, refused, or other missing responses of HHwIOTHRO are assigned special missing codes .d, .r, .m respectively. HHwIOTHRO is set to plain missing (.) for respondents who did not respond to this wave.

HHwIOTHR is the summary of the total household other income that includes individual other income and other household members' other income.

HHwIOTHR = HwIOTHR + HHwIOTHRO

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of individuals with completely missing information in the Wave 2 Individual Income file. These missings affect RwIOTHR.

Differences with the RAND HRS

Individual other income (child support or alimony) in CHARLS are measured in China's currency Yuan whereas the equivalent measure in RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The components in this measure are different from the components for other income in the RAND HRS. In RAND HRS, this measure contains alimony, other income, and lump sums from insurance. There are no questions asking lump sum payments from insurance in CHARLS.

General Comments:

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available starting in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

How Constructed:

RwICAP is the respondent's capital income. These capital income questions are asked in the individual income section.

In Wave 1, respondents can report capital income in any of the following ways:

1. Income earned from stock. Respondents who own any stocks are asked about how much they have earned or lost in the past year. The net value of stock income is derived by taking the amount earned minus the amount lost.

2. Income earned from mutual funds. Respondents who own any mutual funds are asked about how much they have earned or lost in the past year. Net value of mutual funds income is derived by taking the amount earned minus the amount lost.

3. Income from other investments. Respondents who own other investments are asked about how much they received income from other investments.

Starting in Wave 2, respondents are only asked to report capital income in the individual income section once with the following question:

1. How much did you receive altogether from other investments in the past year?

Respondents who indicate that they have not received any capital income in the past year are not asked the value of capital income question and are assigned a value of 0 for RwICAP. Don't know, refused, or other missing responses of RwICAP are assigned special missing codes .d, .r, .m respectively. RwICAP is set to plain missing (.) for respondents who did not respond to this wave.

SwICAP is taken directly from the spouse's value to RwICAP. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HwICAP is the total capital income at the couple level; that is the sum of RwICAP and SwICAP. In addition to the special missing values of RwICAP and SwICAP, special missing value .b is assigned if the respondent's spouse is absent.

HHwICAPH is the total household capital income at the household level. This variable is reported by a financial respondents at the household income section.

The financial respondent reports total household income in the following ways:

1. Annual rental income for all rooms or houses that are currently leased. The rental income is reported monthly. Annual rental income is calculated by taking the monthly amount times 12.

2. Annual rental income for all leased rooms or houses that are received by the other household members

3. Rental income from cultivated land, forest land, pasture and pond

4. Rental income from other household assets other than housing or land, such as fixed capital, durables or livestock

5. Interest that are received from the money that was lent to others

If the financial respondent indicates that the household has not received any capital income in the past year, the value of capital income is not asked and HHwICAPH is assigned a value of 0. Don't know, refused, or other missing responses of HHwICAPH are assigned special missing codes .d, .r, .m respectively. HHwICAPH is set to plain missing (.) for respondents who did not respond to this wave.

HHwICAP is the summary of the total household capital income that includes individual capital income and household capital income

HHwICAP = HwICAP + HHwICAPH

Cross Wave Differences in CHARLS

Income earned from stock and mutual fund are not asked separately after Wave 1 in the CHARLS questionnaire. Instead CHARLS asks how much did the respondent receive altogether.

In the current release of the CHARLS data there is a high number of individuals with completely missing information in the Wave 2 Individual Income file. These missings affect RwICAP.

In the current release of the CHARLS data there is a high number of households with completely missing information for the Household Assets section in the Wave 2 Household Income file. These missings affect HHwICAPH.

Differences with the RAND HRS

Individual capital income in CHARLS are measured in China's currency Yuan whereas the equivalent measure in RAND HRS is current U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The components in this measure are different from the corollary measure in the RAND HRS. In the RAND HRS, capital income contains income from business, rental, stock and mutual funds, bonds, CDs and treasury bills, checking and saving accounts, dividend and interest, and trust fund or royalties. There are no questions asking about trust fund or royalties in CHARLS.

General Comments:

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available starting in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

How Constructed:

HHwITOT is the sum of all income at the household level including income from earning income, pension income, income from government transfer, other income, and capital income.

$HHwITOT = HHwIEARN + HHwIPEN + HHwIGXFR + HHwIOTHR + HHwICAP$

Cross Wave Differences in CHARLS

Refer to "Cross Wave Differences in CHARLS" section of each component to identify cross wave differences.

Differences with the RAND HRS

These values in CHARLS is measured in China's currency Yuan whereas the equivalent measure in RAND HRS in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Refer to "Differences with RAND HRS" section of each component to identify differences with the RAND HRS variable of the same name.

Household food consumption

Wave	Variable	Label	Type

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
HH1CFOOD	16478	233.00	1612.04	0.00	144000.00
HH2CFOOD	14314	347.44	600.66	0.00	21000.00

General Comments:

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available starting in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

How Constructed:

HHwCFOOD is the total household food expenditures in last week.

This measure is comprised of three types of food expenditures:

1. Purchased food and food eaten from own production
2. Meals eaten out
3. Alcohol and cigarettes/tobacco

Financial respondent reports all household living expenditure, including the expenditure from all other household members. If someone attends school or work outside and comes home almost every week, their expenditures are included. However, if someone attends school or work outside but not come home every week, their expenditures are excluded.

Don't know, refused, or other missing responses of HHwCFOOD are assigned special missing codes .d, .r, .m respectively. HHwCFOOD is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in CHARLS

In Wave 1 CHARLS asked the total amount of purchased food and food eaten from own production in the same question. Starting in Wave 2 CHARLS asks the amount of purchased food and food eaten from own production in two separate questions.

In the current release of the CHARLS data there is a high number of households with incomplete information for the Household Living Expenditure section in the Wave 2 Household Income file. These missings affect HHwCFOOD.

Differences with the RAND HRS

This measure is not available in RAND HRS.

CHARLS Variables Used:

Wave 1:

GE006	EXPENDITURE ON FOOD
GE007	EXPENDITURE ON FOOD
GE008	EXPENDITURE ON FOOD

Wave 2:

GE006	expenditure on food
GE006_W2	produce agricultural products by yourself
GE006_W2_1	value of self-consumed products
GE007	expenditure on eating out
GE008	expenditure on alcohol, tobacco

Household non-food consumption in last month

Wave	Variable	Label	Type
1	HH1CNF1M	hh1cnf1m:w1 hhold non-food consumption, last month	Cont
2	HH2CNF1M	hh2cnf1m:w2 hhold non-food consumption, last month	Cont

Descriptive Statistics

HH2CNF1M	15142	417.48	788.99	0.00	43300.00

General Comments:

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available starting in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

How Constructed:

HHwCNF1M is the total household non-food expenditures in last month.

This measure is comprised of seven types of expenditures:

1. Communication fee including post, Internet usage, telephone and cell phone usage
2. Utilities including water and electricity
3. Fuels including gas, coal
4. Fee for housekeeper, matron and servants
5. Local transportation
6. Household items and personal daily toiletries plus beauty treatments
7. Entertainment including fee to buy books, newspaper, etc.

Don't know, refused, or other missing responses of HHwCNF1M are assigned special missing codes .d, .r, .m respectively. HHwCNF1M is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in CHARLS

In the current release of the CHARLS data there is a high number of households with incomplete information for the Household Living Expenditure section in the Wave 2 Household Income file. These missings affect HHwCNF1M.

Differences with the RAND HRS

This measure is not available in RAND HRS.

CHARLS Variables Used:

Wave 1:

GE009_1	COMMUNICATION FEES
GE009_2	UTILITIES
GE009_3	FUELS
GE009_4	FEES FOR MATRON
GE009_5	LOCAL TRANSPORTATION
GE009_6	HOUSEHOLD ITEMS AND PERSONAL TOILETRIES
GE009_7	ENTERTAINMENT

Wave 2:

GE009_1	expenditure on communication
GE009_2	expenditure on utilities
GE009_3	expenditure on fuels
GE009_4	expenditure on servants
GE009_5	expenditure on transportation
GE009_6	expenditure on daily items
GE009_7	expenditure on entertainment

Household non-food consumption in last year

Wave	Variable	Label	Type
1	HH1CNF1Y	hh1cnfly:w1 hhold other non-food consumption, past year	Cont
2	HH2CNF1Y	hh2cnfly:w2 hhold other non-food consumption, past year	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
HH1CNF1Y	15700	9435.89	26352.69	0.00	1165000.00
HH2CNF1Y	14964	12330.89	27329.40	0.00	517000.00

General Comments:

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available starting in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

How Constructed:

HHwCNF1Y is the total household non-food expenditures in last year.

In Wave 1 respondents are asked about fourteen types of expenditures:

- 1.Clothing and bedding
- 2.Long distance traveling expenses
- 3.Heating (centrally heated)
- 4.Furniture and consumption of durable goods
- 5.Education and training
- 6.Medical expenditure
- 7.Fitness expenditures
- 8.Beauty expenditure including make-up, facial and massages
- 9.Purchase, maintenance and repair of transportation vehicle and communication products, etc.
- 10.Taxes and fee turned over to the government
- 11.Automobiles
- 12.Electronics (laptops, computers, etc.)
- 13.Property management fees
- 14.Donations to the society including cash, and items like food, clothing, etc.

Starting in Wave 2, respondents are asked about thirteen types of expenditures:

- 1.Clothing and bedding

- 2.Long distance traveling expenses
- 3.Heating (centrally heated)
- 4.Furniture, consumption of durable goods and electronics
- 5.Education and training
- 6.Medical expenditure
- 7.Fitness expenditures
- 8.Beauty expenditure including make-up, facial and massages
- 9.Automobiles
- 10.Purchase, maintenance and repair of transportation vehicle and communication products, etc.
- 11.Property management fees
- 12.Taxes and fee turned over to the government
13. Donations to the society including cash, and items like food, clothing, etc.

Don't know, refused, or other missing responses of HHWCNPLY are assigned special missing codes .d, .r, .m respectively. HHWCNPLY is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in CHARLS

Wave 1 includes a separate question about electronics but starting in Wave 2, electronics are included with furniture and consumption of durable goods.

In the current release of the CHARLS data there is a high number of households with incomplete information for the Household Living Expenditure section in the Wave 2 Household Income file. These missings affect HHWCNPLY.

Differences with the RAND HRS

This measure is not available in RAND HRS.

CHARLS Variables Used:

Wave 1:

GE010_1	CLOTHING AND BEDDING
GE010_10	Medical expenditure
GE010_11	Automobiles
GE010_12	
GE010_13	Property management fees (including parking fee)

General Comments:

Based on the current release of CHARLS data, "don't know" (.d) and "refused" (.r) special missing responses are only provided for Wave 1. These special missing codes are not available starting in Wave 2. As a result, all missing values are coded to "other missing" (.m) starting in Wave 2.

How Constructed:

HHwCTOT is the amount of total household consumption as aggregated from all consumption activities: food consumption in last week, non-food in the past 30 days, and other non-food consumption in the past year. This variable is calculated as annual expenditures.

The total household consumption HHwCTOT = sum of (HHwCFOOD *52, HHwCNF30 *12, HHwCNF12)

HHwCPERC is the per capita household consumption. This variable is calculated by taking total household consumption divided by the number of people in the household; that is,

$HHwCPERC = HHwCTOT / HwHHRES.$

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

These measures are not available in RAND HRS.

Section G: Family Structure

Number of People Living in Household

Wave	Variable	Label	Type
1	H1HHRES	h1hhres:w1 number of people living in this household	Cont
2	H2HHRES	h2hhres:w2 number of people living in this household	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
H1HHRES	17705	3.59	1.80	1.00	16.00
H2HHRES	18605	2.89	1.54	1.00	14.00

How Constructed:

HwHHRES counts the number of people living in a household, including the respondents.

Number of residents living in a household is obtained by using the household roster file which includes all members reported to live in the household, as identified by the household respondent.

Cross Wave Differences in CHARLS

No difference known.

Differences with the RAND HRS

No difference known.

Number of Living Children

Wave	Variable	Label	Type
1	H1SON	h1son:w1 number of living sons	Cont
2	H2SON	h2son:w2 number of living sons	Cont
1	H1DAU	h1dau:w1 number of living daughters	Cont
2	H2DAU	h2dau:w2 number of living daughters	Cont
1	H1CHILD	h1child:w1 number of living children	Cont
2	H2CHILD	h2child:w2 number of living children	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
H1SON	17705	1.40	1.02	0.00	8.00
H2SON	18605	1.44	1.05	0.00	8.00
H1DAU	17705	1.23	1.11	0.00	8.00
H2DAU	18605	1.29	1.12	0.00	9.00
H1CHILD	17705	2.64	1.44	0.00	10.00
H2CHILD	18605	2.73	1.47	0.00	10.00

How Constructed:

HwSON is the number of living sons of the respondent and/or spouse at the household level, including co-resident or non-coresident sons.

HwDAU is the number of living daughters of the respondent and/or spouse at the household level, including co-resident or non-coresident daughters.

HwCHILD is the sum of HwSON and HwDAU that indicates the number of living children of the respondent and/or spouse, including co-resident or non-coresident daughters.

HwSON, HwDAU and HwCHILD are set to plain missing (.) for respondents who did not respond to this wave.

In wave 1, the number of co-resident children is obtained by counting anyone in the Household Roster file who is a child, using the relationship and gender variable. Starting wave 2, the number of co-resident children is obtained from family information file.

A child can be biological children, adopted children, foster children, and step-children.

Cross Wave Differences in CHARLS

In wave 1, the number of co-resident children is obtained by counting the household member children from household roster file. Starting wave 2, CHARLS does not provide the household roster data file, instead the number of co-resident children is obtained from the family information file.

Differences with the RAND HRS

The RAND HRS does not include the number of living sons and the number of living daughters.

CHARLS Variables Used:

A002_10_	Gender of This Household Member
A002_11_	Gender of This Household Member

Number of Deceased Children

Wave	Variable	Label	Type
1	H1DSON	h1dson:w1 number of deceased sons	Cont
2	H2DSON	h2dson:w2 number of deceased sons	Cont
1	H1DDAU	h1ddau:w1 number of deceased daughters	Cont
2	H2DDAU	h2ddau:w2 number of deceased daughters	Cont
1	H1DCHILD	h1dchild:w1 total number of deceased children	Cont
2	H2DCHILD	h2dchild:w2 total number of deceased children	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
H1DSON	17705	0.07	0.31	0.00	5.00
H2DSON	18605	0.06	0.27	0.00	5.00
H1DDAU	17705	0.05	0.25	0.00	4.00
H2DDAU	18605	0.04	0.22	0.00	3.00
H1DCHILD	17705	0.12	0.43	0.00	6.00
H2DCHILD	18605	0.10	0.37	0.00	6.00

How Constructed:

HwDSON is the number of deceased sons of the respondent and/or spouse at the household level.

HwDDAU is the number of deceased daughters of the respondent and/or spouse at the household level.

HwDCHILD is the sum of HwDSON and HwDDAU which indicates the number of deceased children.

HwDSON, HwDDAU and HwDCHILD are set to plain missing (.) for respondents who did not respond to this wave.

These variables are obtained by counting all the deceased children that respondent reports in the Family information file. The gender variable is used for counting the sons and daughters. A child can be biological children, adopted children, foster children, and step-children.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

These variables are not included in RAND HRS.

CHARLS Variables Used:

S2LIVSIB	15855	3.29	1.85	0.00	9.00

How Constructed:

RwLIVBRO is the number of the respondent's living brothers. CHARLS asks respondent separately about their older and younger brothers. RwLIVBRO is the sum of living older or younger brothers that respondent reports. RwLIVSIS is the number of the respondent's living sisters. CHARLS asks respondent separately about their older and younger sisters. RwLIVSIS is the sum of living older or younger sisters that respondent reports.

RwLIVSIB is the number of respondent's living siblings that is the sum of RwLIVBRO and RwLIVSIS.

When respondent don't know, refused, or their answer is missing for other reason, RwLIVBRO, RwLIVSIS or RwLIVSIB are assigned special missing codes .d, .r, .m, respectively. If the family information questions were skipped because the interview was done by proxy, RwLIVBRO, RwLIVSIS or RwLIVSIB are set to special missing (.p).

RwLIVBRO, RwLIVSIS and RwLIVSIB are set to plain missing (.) for respondents who did not respond to this wave.

SwLIVBRO, SwLIVSIS and SwLIVSIB are spouse's sibling that respondent reported. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in CHARLS

No difference known.

Differences with the RAND HRS

Unlike HRS, the number of spouse's siblings are reported by respondents in CHARLS.

CHARLS Variables Used:

How Constructed:

RwMOMLIV and RwDADLIV are whether a respondent's mother and father, respectively, are still alive. SwMOMLIV and SwDADLIV are whether a respondent's mother-in-law and father-in-law, respectively, are still alive. If the parent is alive, then the derived mortality status is set to 1; if deceased, it is set to 0.

RwLIVPAR counts a respondent's own living parents and SwLIVPAR counts a respondent's living parents-in-law. They are derived by summing the RwMOMLIV and RwDADLIV variables. If either RwMOMLIV or RwDADLIV is missing, then RwLIVPAR is missing. RwMOMLIV, RwDADLIV and RwLIVPAR are set to plain missing (.) for respondents who did not respond to this wave.

RwMOMAGE and RwDADAGE are assigned respectively to R's mother's and R's father's current age if living or age at death if deceased. Don't know, refused, or other missings values RwMOMAGE and RwDADAGE is assigned special missing codes .d, .r, .m, respectively. Special missing code(.i) is assigned to RwMOMAGE and RwDADAGE if the year of the parent born is earlier than 1850 or later than 1950 or dead earlier than 1900 or later than interview year. RwMOMAGE and RwDADAGE are set to plain missing (.) for respondents who did not respond to this wave.

SwMOMAGE and SwDADAGE are assigned respectively to R's mother-in-law's and R's father-in-law's current age or age at death. Don't know, refused, or other missings values SwMOMAGE and SwDADAGE is assigned special missing codes .d, .r, .m, respectively. Special missing code(.i) is assigned to SwMOMAGE and SwDADAGE if the year of the parent born is earlier than 1850 or later than 1950 or dead earlier than 1900 or later than interview year.

Cross Wave Differences in CHARLS

Starting wave 2, respondent was asked to verify whether the the parental mortality they reported in previous wave is correct or not. If the information is incorrect, the

respondent disputes and reports the correct information. Currently in the Harmonized CHARLS previous reports of parental mortality which were later disputed are not adjusted.

Differences with the RAND HRS

No differences known.

How Constructed:

HwFCANY indicates whether the respondent and spouse received any financial (monetary or in-kind support) help from their children or grandchildren in the past year. A code of 0 indicates that the respondent and spouse did not receive any financial support from children or grandchildren. A code of 1 indicates that the respondent and spouse receive some economic support from children or grandchildren.

HwFCAMT is the amount of financial transfers that the respondent and spouse received from their children or grandchildren in the past year. It is a summary variable that includes both regular and non-regular, monetary or in-kind transfers.

The monetary regular transfers include living expenses, water, electricity, telephone expenses, loans or rents. The non-regular transfers include the amount for main festivals, birthdays, weddings, and funerals. The in-kind transfers include supporting food, clothes and others.

In wave 1, the respondent reports monthly, quarterly, half-yearly, or yearly regular transfers. Starting wave 2, the respondent reports total regular transfer amount. For non-regular transfers, the respondent reports total amount.

When respondent don't know, refused, or their answer is missing for other reason, HwFCNAY and HwFCAMT are assigned special missing codes .d, .r, .m, respectively. If the questions were skipped because the respondent doesn't have any children or there is no non-coresiding children or grandchildren, HwFCNAY and HwFCAMT are assigned a value of zero.

Cross Wave Differences in CHARLS

In wave 1, the respondent reports monthly, quarterly, half-yearly, or yearly regular transfers. Starting wave 2, the respondent reports total regular transfer amount.

Starting wave 2, CHARLS does not ask an entry question, i.e., whether respondent receives or gives the transfer or not. Only the amount questions are asked.

Differences with the RAND HRS

The amount of financial transfers that the respondent and spouse received from their children and grandchildren in the past year in CHARLS is measured in Yuan whereas the equivalent measure in RAND HRS is measured in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

These variables are not available in RAND HRS but are available in RAND Family data. HRS only asked one total amount of financial transfer. Unlike HRS, CHARLS asked regular transfer and non-regular transfer from children and grandchildren.

A code of 0 indicates that the respondent and spouse did not give any financial support from relatives or others. A code of 1 indicates that the respondent and spouse give some financial support from relatives or others.

HwTOAMT is the amount of financial transfers that the respondent and spouse gave to non-coresiding relatives or others in the past year. It is a summary variable that includes both regular and non-regular, monetary or in-kind transfers.

The monetary regular transfers include living expenses, water, electricity, telephone expenses, loans or rents. The non-regular transfers include the amount for main festivals, birthdays, weddings, and funerals. The in-kind transfers include supporting food, clothes and others.

In wave 1, the respondent reports monthly, quarterly, half-yearly, or yearly regular transfers. Starting wave 2, the respondent reports total regular transfer amount. For non-regular transfers, the respondent reports total amount.

When respondent don't know, refused, or their answer is missing for other reason, HwTOANY and HwTOAMT are assigned special missing codes .d, .r, .m, respectively.

Cross Wave Differences in CHARLS

In wave 1, the respondent reports monthly, quarterly, half-yearly, or yearly regular transfers. Starting wave 2, the respondent reports total regular transfer amount.

Starting wave 2, CHARLS does not ask an entry question, i.e., whether respondent receives or gives the transfer or not. Only the amount questions are asked.

Starting wave 2, CHARLS does not ask the financial transfer question to or from others. CHARLS adds a new question asking the financial transfer question to or from respondent's or spouse's siblings.

Differences with the RAND HRS

The amount of financial transfer that the respondent and spouse gave to relatives or others in the past year in CHARLS is measured in Yuan whereas the equivalent measure in RAND HRS is measured in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

These variables are not available in RAND HRS but are available in RAND Family data. HRS only asked one total amount of financial transfer. Unlike HRS, CHARLS asked regular transfer and non-regular transfer from others.

CHARLS Variables Used:

CE036_1	regular monetary support
CE036_2	regular in-kind support
CE036_3	non-regular monetary support
CE036_4	non-regular in-kind support
CE039_1	regular monetary support
CE039_2	regular in-kind support
CE039_3	non-regular monetary support
CE039_4	non-regular in-kind support

Total Family Financial Transfers

Wave	Variable	Label	Type
1	H1FREC	h1frec:w1 total amount of transfers received	Cont
2	H2FREC	h2frec:w2 total amount of transfers received	Cont
1	H1TGIV	h1tgiv:w1 total amount of transfers given	Cont
2	H2TGIV	h2tgiv:w2 total amount of transfers given	Cont

2	H2FTOT	h2ftot:w2 net value of financial transfers	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
H1FREC	15431	2199.82	17774.64	0.00	1428000.00
H2FREC	10805	5829.68	20444.22	0.00	1050000.00
H1TGIV	15431	1395.06	8922.61	0.00	350000.00
H2TGIV	10750	6187.00	112640.67	0.00	8104000.00
H1FTOT	15294	809.73	19870.41	-350000.00	1428000.00
H2FTOT	10581	-368.69	110743.57	-7877800.00	369000.00

How Constructed:

HwFREC indicates the total amount of financial transfers that the respondent and spouse received in the past year. It is a summary variable which includes the following components:

1. amount of transfers from children or grandchildren (HwFCAMT)
2. amount of transfers from parents or parents-in-law (HwFPAMT)
3. amount of transfers from other (HwFOTMT)

$HwFREC = HwFCAMT + HwFPAMT + HwFOTMT$

HwTGIV indicates the total amount of financial transfers that the respondent and spouse gave in the past year. It is a summary variable which includes the following components:

1. amount of transfers to children or grandchildren (HwTCAMT)
2. amount of transfers to parents or parents-in-law (HwTPAMT)
3. amount of transfers to other (HwTOTMT)

$HwTGIV = HwTCAMT + HwTAMT + HwTOTMT$

HwFTOT indicate the net value of financial transfers in the past year.

$HwFTOT = HwFREC - HwTGIV$

Cross Wave Differences in CHARLS

Refer to "Cross Wave Differences in CHARLS" section of each component to identify differences between waves.

Differences with the RAND HRS

These values in CHARLS is measured in Yuan whereas the equivalent measure in RAND HRS is measured in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Refer to "Differences with RAND HRS" section of each component to identify differences with the RAND HRS variable of the same name.

.w:not working		4177	4505
0.no		10390	10749
1.yes		113	184

How Constructed:

RwWORK indicates whether a respondent did any work in the past year. A value of 1 indicated that the respondent is either doing an employed paid job, is self-employed, is working unpaid for a family business, or working in the agricultural field. A value of 0 indicates that the respondent is not currently doing any work.

RwWORK2 indicates whether a respondent is working more than one job. RwWORK2 is set a value of zero (respondent is not working more than one job) if RwWORK is zero. Special missing code(.w) is assigned to the respondent who does not work for any job

Don't know, refused, or other missing responses of RwWORK and RwWORK2 are assigned special missing codes .d, .r, .m respectively. RwWORK and RwWORK2 are set to plain missing (.) for respondents who did not respond to this wave.

SwWORK is whether the respondent's spouse in the current wave is currently working. It is taken from the spouse's RwWORK. SwWORK2 is whether the respondent's spouse in the current wave is working more than one job. It is taken from the spouse's RwWORK2. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

The HRS asks the respondents "are you doing any work for pay at the present time". As a result in the RAND HRS, the definition of code 1 for RwWORK indicates currently working for pay and code 0 for RwWORK indicates currently not working for pay. Differently, the CHARLS asks respondents if they engage in agricultural or non-agricultural work.

Also different from the RwWORK in the RAND HRS, RwWORK in the Harmonized CHARLS indicates not only the paid work, and it also includes the unpaid family business.

The time span of the CHARLS is specific to the last year whereas the HRS refers to the present time.

CHARLS Variables Used:

Wave 1:

FA001	ENGAGE IN AGRICULTURAL WORK FOR MORE THAN 10 DAYS
FB011	PROCESSED RETIREMENT
FB012	Have you completed receding position procedures ?
FC001	Did you work for other famers in wage for at least ten d
FC008	Did you work for your own household for at least ten day
FC014	WORK FOR AT LEAST ONE HOUR LAST MONTH IN NON-AGRICULTURA
FC015	HAVE NON-AGRICULTURAL WAGE OR SELF-EMPLOYED WORK BUT ARE
FC019	DO YOU CURRENTLY HAVE MORE THAN ONE JOB
FC020	DO YOU EARN A WAGE, RUN YOUR OWN BUSINESS
FC021	How do you describe your non-agricultural job? Do you ea
FD001	THE TYPE OF RECEIVING YOUR WAGE

Wave 2:

FA001	engage in agricultural work for more than 10 days
FA002	work for at least one hour last month
FA003	have a job but are temporarily laid-off, on sick or othe
FA005	do you expect to go back to this job
FA006	do you receive any salary from this job
FA006_W2_5	how many other jobs have you been doing from last iwr?
FA007	ever work 3 months
FA008	sure never work 3 months
FB011	completed retirement procedures or internal retirement
FB012	completed receding position procedures
FC001	any work for other farmers in wage
FC008	any work for own household
FC014	last week any non-agricultural work
FC014	last week any non-agricultural work
FC015	currently laid-off
FC017	expect to go back within 6 months
FC019	more than one non-agricultural job
FC020	main job
FC021	type of non-agricultural job
FD001	receive wage from wprkplace or dispatch company

Categorical Variable Codes

Value-----	R1SLFEMP	R2SLFEMP
.m:missing	242	258
0.not self-employed	16319	17023
1.self-employed	1145	1328

Value-----	S1SLFEMP	S2SLFEMP
.m:missing	121	101
.u:unmar	2278	2418
.v:sp nr	538	638
0.no	13737	14251
1.yes	1031	1197

How Constructed:

RwSLFEMP indicates whether the respondent is self-employed or not. It is a derived variable that is based on two questions:

First question:

"Among all your jobs, which one is your main job? [Main job is defined as the job at which you work the longest hours] Do you earn a wage, run your own business, or work for unpaid family business?"

Second question:

"How do you describe your non-agricultural job? Do you earn a wage, run your own business, or work for unpaid family business?"

RwSLFEMP is assigned a value of 1 if the respondent answers "run your own business" in either of the two questions. RwsLEMP has a value of 0 if not self-employed. If respondents don't know, missing, or refuse to answer, RwSLFEMP is assigned special missing values .d, .m, or .r, respectively. RwSLFEMP is set to plain missing (.) for respondents who did not respond to this wave.

SwSLFEMP is whether the respondent's spouse in the current wave is self-employed or not. It is taken from the spouse's values RwsLEMP. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing

value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

In the HRS, there is a direct question asking about self-employment: "do you work for someone else, are you self-employed, or what?" In the CHARLS, there are two questions: one for main job if more than one job and with only one job.

CHARLS Variables Used:

Wave 1:

FA001	ENGAGE IN AGRICULTURAL WORK FOR MORE THAN 10 DAYS
FB011	PROCESSED RETIREMENT
FB012	Have you completed receding position procedures ?
FC001	Did you work for other famers in wage for at least ten d
FC008	Did you work for your own household for at least ten day
FC014	WORK FOR AT LEAST ONE HOUR LAST MONTH IN NON-AGRICULTURA

3.self-employed	1031	1197
4.unpaid family business	245	344
5.unemployed	40	39
6.retired	1293	1501
7.not in labor force	2849	2977

How Constructed:

RwLBRF_C summarizes the labor force status for the respondent as agricultural work, employed, self-employed, unpaid family business, unemployed, retired, and not in the labor force.

RwLBRF_C is derived based on the following questions:

1. If the respondent has only one job:

"How do you describe your non-agricultural job? Do you earn a wage, run your own business, or work for unpaid family business?"

- a. Employed
- b. Self-employed
- c. Unpaid family business

2. If the respondent has more than one job:

"Among all your jobs, which one is your main job? [Main job is defined as the job at which you work the longest hours] Do you earn a wage, run your own business, or work for unpaid family business?"

- a. Employed
- b. Self-employed
- c. Unpaid family business

3. If the respondent is unemployed, retired or not in the labor force:

"Have you completed retirement procedures (including early retirement) or internal retirement (Note: Retirement from government departments, enterprises and institutions, not including retirement in the sense of getting agricultural insurance)?"

"Did you search for a new job during the last month?"

4. If the respondent does agricultural work:

"Did you engage in agricultural work (including farming, forestry, fishing, and husbandry for your own family or others) for more than 10 days in the past year?"

RwLBRF_C is derived using the order of above listed questions, i.e. RwLBRF_C first takes the value from (1) for only one job, then (2) for more than one job, then (3) for unemployed, retired and not in labor force, then (4) agricultural work. As a result RwLBRF_C gives precedence to working statuses associated with employment and retirement.

If a respondent is currently not working and is searching for a new job, they are assigned a code of "unemployed". If a respondent is currently not working and mentions having completed retirement procedures, they are assigned a code of "retired". If a respondent is currently not working and does not mention searching for a new job or having completed retirement procedures, they are assigned a code of "not in labor force". RwLBRF_C is set to plain missing (.) for respondents who did not respond to this wave.

SwLBRF_C summarizes the labor force status for the respondent's spouse. It is taken directly from the respondent's spouse's values to RwLBRF_C. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

Starting in Wave 2, if a respondent previously reported having completed retirement procedures, they are not asked again in the following waves if they have completed retirement procedures. In these cases assuming the respondent is still not working RwLBRF_C is based on the previous report of retirement.

Differences with the RAND HRS

Unlike the HRS, the CHARLS use different categories to classify the labor force such as agricultural work and unpaid family business.

Because of differences in surveys and variables' derivation, RwlBRF_C in the Harmonized CHARLS uses a different categorization than RwlBRF in the RAND HRS. For example, RwlBRF_C does not separate out full-time and part-time work, which are treated as distinct categories in RwlBRF. Also, unlike RwlBRF in the RAND HRS, RwlBRF_C does not feature the status of "partly retired".

CHARLS Variables Used:

Wave 1:

FA001	ENGAGE IN AGRICULTURAL WORK FOR MORE THAN 10 DAYS
FA007	HAVE YOU EVER WORKED FOR AT LEAST A FEW MONTHS
FA008	HAVE YOU EVER WORKED FOR AT LEAST A FEW MONTHS

.v:sp nr	538	638
0.no	13475	13947
1.yes	1293	1501

How Constructed:

RwRETEMP indicates whether the respondent is retired or not. It is derived based on RwLBRF_C. A value of 1 indicated that the respondent is retired. A value of 0 indicates that the respondent is not retired. Please see RwLBRF_C for more detail. RwLBRF_C is set to plain missing (.) for respondents who did not respond to this wave.

SwRETEMP indicates whether the respondent's spouse's is retired. SwRETEMP is taken from the spouse's values RwRETEMP. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

R2JHOUR2	188	8.96	16.68	0.00	105.00
S1JHOUR2	124	11.56	17.90	0.00	105.00
S2JHOUR2	173	9.15	16.57	0.00	105.00

How Constructed:

RwJHOURS_C is the number of hours that the respondents works per week for their main job in the past year. RwJHOURS_C includes the hours from working as an employee, working as self-employed, working without pay for a family business, working at another person's farm, and working at one's own farm.

The variable is derived from two components:

1. number of work hour on each day
2. number of days work in each week

In order to calculate the number of hours per week in the past year we use the following formula:

$$\text{RwJHOURS_C} = \text{number of work hours on each day} * \text{number of days work in each week}$$

In the case the respondent reports working more than 7 days a week RwJHOURS_C is calculated as number of works hour * 7 days a week.

CHARLS allows respondents to report the hours of work for multiple jobs. If a respondent works as an employee then RwJHOURS_C is based on hours per week from working as an employee. If a respondent is self-employed then RwJHOURS_C is based on hours working as self-employed. If a respondent works as a farmer then RwJHOURS_C is based on the number of hours working at another person's farm or the number of hours working at one's own farm, whichever is greater. If a respondent works without pay for a family business they are not asked the number of hours are assigned a special missing value .f. Special missing .m is assigned for missing response. Special missing

.w is assigned if the respondent is not rocking. RwJHOURS_C is set to plain missing (.) for respondents who did not respond to this wave.

RwJHOUR2 is the number of hours per week the respondent works for other jobs (side jobs). In the case that a respondent reports working more than 168 hours a week, RwJHOUR2 is top-coded at 168 hours. If the respondent does not report working more than one job, special missing .w is assigned. Don't know, refused, or other missing responses of RwJHOUR2 are assigned special missing codes .d, .r, .m respectively. RwJHOUR2 is set to plain missing (.) for respondents who did not respond to this wave.

SwJHOURS_C is the number of hours the respondent's spouse in the current wave spends on their main job. It is taken from the spouse's values RwJHOURS_C. SwJHOUR2 is the number of hours the respondent's spouse in the current wave spends on their other job. It is taken from the spouse's values RwJHOUR2. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in CHARLS

No differences known.

Differences with the RAND HRS

In the HRS, a respondent reports the average number of working hours a week at his/her main job.

Unlike the HRS, the CHARLS asks the number of hours separately for working as an employee, working as self-employed, working for other farmers, and working at one's own farm. RwJHOURS_C is the number of hours worked per week at the main job as identified in RwLBRF_C. Also different from the RwJHOURS in the RAND HRS, RwJHOURS_C is calculated by using the number of hours a day and the number of days a week.

CHARLS Variables Used:

Wave 1:

FA007	HAVE YOU EVER WORKED FOR AT LEAST A FEW MONTHS
FA008	HAVE YOU EVER WORKED FOR AT LEAST A FEW MONTHS
FB011	PROCESSED RETIREMENT
FB012	Have you completed receding position procedures ?

How Constructed:

RwJWEEK_C is the number of weeks a respondent works per year at his/her main job. RwJWEEK_C includes the worked weeks from working as an employee, working as self-employed, working without pay for a family business, working at another person's farm, and working at one's own farm.

Respondents are asked about the number of months worked per year. Respondents can report the months of working for multiple jobs. For example, a respondent can report months of working for both working as an employee and working at another person's farm. RwJWEEKS_C recodes the number of weeks from the main job identified in RwLBRF_C. RwJWEEKS_C is derived by multiplying the number of months by 4.33 so that RwJWEEKS_C is expressed in number of weeks.

If a respondent works as an employee then RwJWEEKS_C is based on weeks from working as an employee. If a respondent is self-employed then RwJWEEKS_C is based on weeks working as self-employed. If a respondent works as a farmer then RwJWEEKS_C is based on weeks working at another person's farm or weeks working at one's own farm, whichever is greater. If a respondent works without pay for a family business they are not asked the number of hours are assigned a special missing value .f. If the respondent does not report working, special missing .w is assigned. RwJWEEK_C is set to plain missing (.) for respondents who did not respond to this wave.

SwJWEEKS_C is the number of hours the respondent's spouse in the current wave spends on their job. It is taken from the spouse's values RwJWEEKS_C. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.
